Spill Pallet How to Store Liquid Gold by [Julia Roger](#)

Article published on March 27th 2012 | [Environment](#)

Some of the spill pallet is made of 100% polyethylene material and they are resistant to most chemicals, which includes caustics and acids. There is ultra spill pallet with a drain material that offers additional advantage for maintaining the safety of the employees because the position of the containers is kept just below the eye level. This in turn reduces the danger of splashes, which might damage the face, and eyes of the employees. When there is transfer going on for hazardous chemicals then you need to be very careful during that time. These containers are having a unique design that allows multiple pallets to be stacked together for shipping and storing purposes.

When you think of storing such containers, they require a negligible amount of space. There are optional ramps that are helpful in loading and unloading of containers. Such containers are having a 66-gallon sump capacity and the load capacity of such gallons is quite huge. There are poly spill pallets that have a secondary containment system that is made of durable polyethylene and has a removable grate for the easy cleaning of the sump. Such sumps can be lifted and moved about as needed with a forklift.

An oil bund is a place that is constructed for the easy storing of the liquid gold. These bunds are constructed according to the availability of the land. This does mean that the place should be ideally positioned for the erection of such oil bunds. The oil pallets are made of long containers that are placed on a straight row in place of a square form. These containers can be easily fitted up along a wall or in a narrow area and is made of polyethylene materials. The grates are sturdy and can be detached easily for cleaning. The spill pallet may vary in size, load bearing and sump capacity as well. Polyethylene is the only material that is used for the manufacturing of sump pallets of different sizes and types that are available within the range. Such pallets are durable, lightweight and have highly impact resistance so they add to their long life.
