Article published on March 15th 2012 | Finance

The Audi A3 is Audi's compressed hatchback that was a Modern increase to the Audi array for 2006. Audi depicts the A3 as the primary four-door car with the sportiness of the TT vehicle. Rescuing sporty driving dynamic in a best compress package, the Audi A3 is planned to adapt an active life style while delivering the excellence of a lavishness sedan. Audi underlines that the A3 is not a wagon, other than is designed more similar to a vehicle that sits low to the road with a mild sloping roofline and a small rear overhang. The Audi A3 contains the now brand mark Audi single border grille.

There seems to be much more to this overly hyped Audi A3 than what most of us know. This car, which enjoys the Volkswagenâ€™s MQB platform, has already been unwrapped for lease. It would definitely be a herculean job to topple this powerful car from the big podium where it commands all-time supremacy.

The car has been ranked ahead of the other cars in its category with the VW Passat, Skoda and many others lurking behind it. The Audi A3 also treats its customers to a range of brilliant features such as connectivity technology â€“ a feature that is unmatched in the industry.

With the MQB platform which is also a favorite with the Volkswagen group, the lease of this Audi A3 assures its customers of a diesel-electric power train untypical of the second Cross Coupe design.MQB Modular Transverse Matrix makes it possible to standardize vehicle component parameters and still allows accommodation of new technologies.

Are you struggling with issues to do with leases? This means that brilliant features incorporated in very expensive cars can be installed in this car at even half the initial price. It is believed that the Volkswagen group has maintained its steady revenues and sales all courtesy of this MQB. The Audi A3 is an environmentally friendly car with very minute CO2 emissions levels compared with other models. The Audi A3 is already in the UK market and buyers opting to lease this car can benefit from these excellent features.

Moreover, the Audi A3 goes with one of 2 engines: Audi's companion and sprightly 2.0-liter turbocharged inline-4 or a 2.0-liter TDI turbodiesel. The TDI is not almost as immediate, but it pays with an EPA-predictable 42 mpg on the main road and 34 mpg in mixed driving. One downside, nevertheless, is that Audi's Quattro all-wheel-drive system is not accessible with the TDI -- somewhat to believe if you live in a field prone to inclement weather or if road-holding prowess is a precedence.
