Air Sanitizers Prevent Flu when Caring for the Sick by DJ Keller

Article published on January 4th 2012 | Fitness

The utilization of effective air sanitizers is essential to your well being when caring for others since infectious diseases are the leading causes of death each year. Continually killing contagious diseases like flu viruses and bacteria with air sanitizers enhances your indoor air quality and prevents the spread of deadly germs.

Flu is the Leading Cause of Death

Flu & Pneumonia are Leading Causes of Death according to the Centers for Disease Control. When providing care to a household member who is sick with the flu, protect yourself and others who are not sick with the use of air sanitizers and taking the precautions overviewed below.

Prevent Getting the Flu When Caring for Others by Using Air Sanitizers

When caring for a sick person who has the flu, keep the person away from other people and in a separate room if possible. If you are in a high risk group for complications from influenza, you should attempt to avoid close contact (within 6 feet) with any household member who is sick. Have everyone clean their hands often, using soap and water. If close contact with a sick individual is unavoidable, consider wearing a facemask or respirator, if available and tolerable.

The Centers for Disease Control (CDC) also recommends use of air sanitizers to prevent the spread of flu. Visit sanibulb.com for a simple bright idea of how you can protect yourself while caring for others. Theyâ€™ve made fighting infectious diseases as easy as changing your light bulb.
