Article published on December 29th 2011 | Fitness

If you are disabled person or your loved one is handicapped then handicap lift can give you back your freedom. But the price of the handicap stair lift is very high so that is why before you invest your money on this, you should know the best stair lifts which will give you the most benefit.

There are two general types of the handicap stair lifts, these are straight stair lift and curved stair lift. It further classified into two main categories, first is AC mains handicap stair lift and second is DC battery operated stair lift. If you think you require a curved stair lift then you must have the information that the curved stair lift is much more expensive than the straight stair lift. Most of the producers of stair lift only manufacture straight stair lifts. These manufacture companies tell you that you have to use two stair lift for middle landing. However you should have one thing keep in mind that you will have to get on and off the handicap lift two times, it is very difficult and problematic task for a disable person.

There are some great advantages of this main power stair lift. You can use as much you like electric stair lift. On the other hand battery operated stair lift requires to be recharged after some usage. If you use stair lift more than twenty times a day then you should considered to purchase an electric stair lift.

In home there is only one user of this wheelchair lift, so the simple stair lift is effective and good to serve his need but in the public spaces the handicap stair lift need more considerations and include as much as possible features because we do not have the information about the next user.

Battery operated handicap stair wheelchair lifts provide the disable person more flexibility to operate and use this lift even when the power supply of the home is shut off. So the battery operated stair lift make the disable person more independent, most of the battery operated lifts have the power of 250 watts.

Before installing handicap wheelchair stair lift, you should take a look on the whether there is a sub landing at the top of the set of steps or not. Manufactures of this lift are able to design a platform that can cover the gap between the stair lift and landing.
