Home Air Cleaner Enhances Health by DJ Keller

Article published on January 4th 2012 | Fitness

According to the Harvard School of Public Health and Harvard Initiative of Global Health medical researchers, the cleaner the air you breathe, the longer you will live. These results indicate that utilizing a home air cleaner to reduce indoor air pollution will keep you healthier and help prolong your lifespan. By destroying germs and chemical pollutants, a home air cleaner will improve your indoor air quality and prevent both short and long term harmful effects of chemical and biological contaminant exposure.

Indoor Air Pollution Contributes to Poor Health

According to the Environmental Protection Agency (EPA), "indoor pollution can be as much as 100 times greater than outdoors". Health effects from indoor air pollutants may be experienced soon after exposure or, possibly, years later.

Immediate effects from indoor air pollutants may show up after a single exposure or repeated exposures. They include irritation of the eyes, nose, and throat, headaches, dizziness, and fatigue. Such immediate effects are usually short-term and treatable. Often times the treatment is simply reducing the person's exposure to the source of the pollution. Some people can become sensitized to biological pollutants after repeated exposures, and other people can become sensitized to chemical pollutants as well. This syndrome is referred to as Multiple Chemical Sensitivity.

Home Air Cleaner Removes Toxins

Use the SaniBulbâ„¢ Home Air Cleaner Purifier to destroy microbial and chemical pollutants. To learn more about improving your indoor air quality, visit www.sanibulb.com for a simple bright idea.
