Article published on June 6th 2012 | Fitness

Moisture and elasticity in the skin make it young and supple. As we age, and the skin loses its natural moisture, it becomes more prone to creases, or folds. In addition to aging and dehydration, sun damage, smoking, and intake of certain medications can also cause wrinkles to develop. The easiest way to be aware of all the skin related problems faced by women and how they are dealing with the same would be to go through Hydroxatone customer reviews. Hydroxatone AM/PM is a leading anti-aging cream.

What can be done to reduce or prevent wrinkles? We have all heard about famous personalities getting Botox or going under the knife to reverse the effects of wrinkles from their faces and neck. This, however, is a costly option which everyone cannot afford. Then, there are the prescription creams and chemical peels. The easiest way to keep the skin wrinkle free would be to take proper care. This would prevent the wrinkles from coming up in the first place. You could also try using an anti-wrinkle cream, such as Hydroxatone, to keep the skin smoother, softer, and wrinkle free. Hydroxatone customer reviews have many favorable things to say about its efficacy.

At the outset, we need to realize that blaming our genes would be of a little help in the battle against wrinkles. You cannot deny the fact that some of us age more gracefully than others. Scientists have also found that the genes we inherit from our parents affect the way we age. These same people have also revealed that the way we age is also governed by the choices we make in our lives. The heredity factor is responsible for only 30 percent of the aging process. The rest 70 percent is in our hands. We can do quite a bit to take care of our skin and keep wrinkles at bay. The success stories featured in the Hydroxatone customer reviews give enough reasons for hope.

Protect your skin from UV rays

With age, the genes controlling the production of collagen and the skin's water retention capabilities begin to work erratically, causing wrinkles to form. These genetic mutations are more when the skin is exposed to the sun. Women need to be really careful while venturing out in the sun. Use sun blocks with SPF 15, or higher. Wear a wide brimmed hat. Do whatever you have to and keep your skin well guarded.

Eat a lot of food products containing anti-oxidants

In instances when UV radiations get absorbed, free radicals are created in the skin. These are volatile molecules which can attach themselves onto your DNA and bring about wrinkle causing mutations. To help build a defense mechanism against these free radicals, you would need to increase your intake of food containing anti oxidants, such as green tea, pomegranates, and blueberries.

Use anti-wrinkle solutions to get younger and smoother skin

You could try using an anti-wrinkle cream, such as the Hydroxatone AM/PM, to reduce the appearance of fine lines and wrinkles from your face and neck. Hydroxatone customer reviews are very upbeat and optimistic. People have shared their success stories about how the product has transformed their lives. Visit the official site to know more about Hydroxatone skin care, and where to buy Hydroxatone.
