Different types of medical conditions can cause severe problems with the bladder and in the urinary tract. In these cases, it is essential to use high-quality and sterile catheter supplies. This is a good practice and safe for patients and people who might be travelling and suffer from incontinence. Due to transformations and advancements in the medical science, it has become very easy to combat with such problems or conditions. In fact, it has become easier to choose the right device for different medical conditions.

If you are facing a similar problem, then it is necessary to find vital information about the catheter supplies you need. Only medical professionals can best recommend the catheter solution as per your needs and medical conditions. You can find both internal and external devices, for men and women. These are disposable single use items and are completely safe to use as per the medical health guidelines, and education.

Self-catheterization should be a perfectly sterile process of draining urine from the bladder. It is the best way to properly drain urine in a safe and secure manner to prevent infection. Catheterizing is often exercised when normal draining is not possible. Appropriate use of intermittent catheters can dramatically reduce the threat of urinary tract infections and other damages caused to the urethra. You can find different types of urinary catheters as per the medical conditions and body requirements in the medical market.

Some types of catheters come pre-lubricated and some need to be lubricated before use. However, you can purchase the one that suits your needs. You can get high-quality sterile, single use catheters with straight tips and funnel ends for optimum comfort. Most of the people choose catheter that are non-lubricated, sterile packaging, specifically designed to be used at any point of time. The most advanced intermittent catheters are made of medical-grade PVC, having polished eyelets for comfortable insertion and easy withdraw.

These catheter supplies are particularly designed for self catheterization and make the process of urine drainage a more comfortable and smoother experience for the users. Today, it is easy to find different types of Urological Supplies (External Catheters, Intermittent Catheters) in different sizes like, small 21 mm, medium 25 mm, intermediate 30 mm, large 35 mm, and x-large 40 mm. You can also purchase a vast variety of sterile catheter supplies and skin barriers, ointments, and sterile cleaning aids from online stores. These are specifically aimed at providing maximum comfort and dignity to the patients and aid in assisting trained medical professionals.
