Pro Flight Simulator Review- an Alternative to Professional Flight Simulator for Pilot Training by Aproflight

Article published on March 21st 2012 | Games

In the professional training of pilot the advent of computer aided design (CAD) programs are propelled to make their education or training more interactive or realistic. This program is basically designed for practicing about how to fly in sky? It contains all the controls as similar to plane so that pilot can feel a real atmosphere of his/her training. Video game industry has grown immortally as games became increasingly realistic and interactive through 3-D imaging. Pro Flight Simulator is a video game with virtual controls which are based on real life like night flying. This game is designed with purposes to make you fly on all over the world by sitting at your home, easy to install and to provide more satisfaction at affordable price. The most interesting thing about this game is that it is really dynamic because it makes you able to change your scenery and airports to fly all over the world and it includes around 20,000 airports to and scenery sites. So I can say that it is better than any other simulator game.

How Pro Flight Simulator provides you the most real experience of flying because you get to control every switch, button, and handle and you can also set itâ€™s weather according to time like day, night because can track the current computer clock time in order to correctly place the sun, moon, stars, etc. how it helps to the student of pilot? Itâ€™s dynamic and virtual controls makes a student able to play all the functions of real plane. A student has to admire all the situations or risks while flying in sky, there are so many situations of crashes and all these situations are included in the journey of this video game which will teach or prepare you for your future. As a student you can test your skills in different kinds of planes like different kinds of helicopter with different kinds of controls. Managing flying is a different experience which requires a safe and orderly flow of air traffic and to manage this one should practice with CAD program to feel the real atmosphere of flying in sky and another way to experience this is pro flight simulator which makes you able to fly at your home. Itâ€™s like your private plane which is flying all over the world with 20,000 airport and sceneries. So fly in Australia, Paris and even over your home.

Now! About pro flight simulatorâ€™s portability about managing the weather: flying on sky requires experience of controlling weather like effects of wind on fight. Flight simulation can calculate your nearest airport and fetch the current meter for station the NOAA weather service. The atmosphere parameters calculated are: temperature, dew point, pressure density, wind etc. pro flight simulator creates unique and customize views to imagine real air fly. Play back video of each fly is also available in the game features which help you in learning about all your mistakes like you can simulate takeoffs, landings, crashes, and other flying scenario. So this game is designed properly to provide an alternative to professional flight simulator. Its professionalism can be seen in its features, letâ€™s take a customized Pro Flight Simulator Review for highlighting its most important features for professional pilot training, it includes 20 thousand airports which is designed with considering all the real airports and it provides the real controls to fly. Seven flyable real-world jets, which means a lot of variety to know different kinds of jet and their functioning, multiplier support 32 player is stunning feature to experience real fly on sky. The realistic and dynamic feature of this game makes you able to actually fly. Integrating real time data means you can include or add airports and sceneries according to your choice, this game make you able to choose your takeoff destination and also your landing destination. In learning section it includes so many features for becoming pilot like how to get ready for takeoff? How to control weather? And it includes 120+ airplanes and helicopters to fly. Thatâ€™s why it is used by professional flight schools to train pilots.
