Article published on July 13th 2012 | Gardening

Since a very long time, deer damage has been a big concern for most of the farmers in the US. Poor farming community is has been facing almost million-dollar losses in agricultural investments, according to the reports. Though some of the individuals have used deer repellent plants, but it has been not very much effective to deter those hungry group of deer from entering their investments. So, what ultimately are they doing? Well, most of the farmers have realized the fact that the use of sturdy deer fence system is the best way to keep the deer out and let the property grow and ripe properly. Fencing is a durable structure build with high quality materials to keep the deer and other animals out of property.

Deer fencing can be used in many applications. One can use it to protect landscape-planting, nurseries, gardens, orchards and many other investments, apart from vinyard protection. It is the best way to deal with harmful animals like horse, goat, sheep and cattle. With Lyme disease becoming so common, using a strong deer control system is essential to keep this malady at bay. According to medical reports, Lyme is caused by deer tick and leads to severe headache, mild fever and infection in humans. If you use a fencing solution, you can reduce the spread of this disease up to 95 percent. These are perhaps the most obvious reasons for the increased usage of deer fencing solutions in vinyard, orchards, nurseries etc.

Vinyard fencing solutions are available in a wide range of sizes, shapes, designs, styles, materials and prices. There are both small and large deer fence systems depending on the use. Small fences are designed for small sized farms, while bigger ones are meant for large farms or vinyards. You can find usually 6, 8, 10, 12 feet tall high fences. There are different types of fencing systems available for purchases like board fencing, wood fencing, high tensile fence, woven wire fence, mesh fencing, plastic fences and stone fencing to mention a few. Among all these solutions, high tensile fence seems to be the most viable option to protect agricultural investments from the menace of deer and other animals.

The price of fences also varies in terms of quality, durability, effectiveness and size. If you are a vinyard owner and looking to protect it, choosing the appropriate fencing system is the key. Make sure you buy it from a reputed company having years of experience and expertise in the fencing industry. Always, hire professional installers who understand your needs and can install a system accordingly. Make sure that the fencing company uses heavy-duty gates, strong wires, cables and posts to erect your fence.
