Article published on July 31st 2012 | Gardening

artificial lawn grass is becoming more and more popular these days. They look amazing and require low maintenance when compared to real grasses. However, they need to be given some tender touch of care and affection at regular interval to retain their beauty. There are several tools that are used for maintaining the lawn. Some of these tools are hard brush, garden vacuum, herbicide spray, and soft rake.

To clear the artificial grass lawn from dirt and debris, it is best to use a hand brush. After all, cleaning is necessary to make the place free from termite and debris. But it is not necessary to brush on a daily basis. Rather, brushing once a week will keep the artificial grass lawn clean and neat. Brushing against the pile is recommended. Debris, like leaves, if left on the lawn for long period, grows moss on it. So, it is necessary to clean the lawn at least once in a week to prevent moss from occurrence.

A garden vacuum is ideal to clean the lawn in the best possible way. Autumn is the season when lot of dry leaves will fall from the trees and make the lawn dirty. This is the time when vacuum cleaner can be effective in cleaning the area. Also, stop growth of weeds in the lawn. This will start spreading moss. Herbicide needs to be sprayed once in every five days. This is essentially required to prevent growth of germs within the lawn premise.

During house external painting, the lawn should be covered properly in order to prevent paint spill or drips from falling on lawn. Another word of caution: never go to the lawn with any flammable objects like cigarette or crackers. This can result in melting of the pile.
