Buying a GoPro HD Motorsports Hero Camera for a Thrilling Motorbike Racing Adventure by [Steve](#)

Article published on June 14th 2012 | [Hardware](#)

A GoPro HD Motorsports Hero is designed for convenient capturing or recording of live motorsports action, in particular the motorbike type of sporting activities. As put by its manufacturer, the GoPro HD Motorsports camera was developed for the ordinary use by the normal consumer, though tested by some of the most experienced motorsport professionals in the industry.

Why opt for this particular action capturing device?

The camera offers the user with astounding stability, clarity and impact proof type of an outer housing. Using this amazing live action capturing camera, you can be able to shoot different types of videos or still pictures from what the professionals refer to as the POV perspective. Best of all, the camera can be mounted on a motorcycle's or vehicle's bodywork, user's helmet or any other equipment as deemed appropriate.

As a matter of fact, the camera was specifically designed for extreme motorsport activities, offering superior and professional HD quality type of recording while in action. It offers the user with an option to film in slow motion cinema (720p), true HD video (1080p) and maximum wide angle (960p). To record in slow motion cinema (720p) option, it takes either thirty or sixty frames per second.

All in praise of an amazing event recording or capturing device!

The one of a kind video color quality and superior images that is captured using a GoPro HD Motorsports camera are made possible through the use of very up dated DSP technology. This offers the best ever automatic exposure adjustment that is possible while using a wearable modern live action capturing device available in the market today. The exceptional clarity in sound is made possible by its one of a kind automatic gain controller that ensures that the wind noise is tolerably reduced while at high speeds. Best of all, the camera is normally automatic, meaning that all its operations are mostly unmanned. The user can take photographs by design or automatically at intervals of two, five, ten, thirty and sixty seconds apart.

To make things as convenient as possible for the user, once the shutter button is pushed on, the camera takes all the wanted photographs automatically, at the same time ensuring that all the exciting moments are all captured while at it.

GoPro HD Motorsports: Features in summary
