Custom gaming computers in Saint Louis ,Missouri by Steven Miller

Article published on April 23rd 2012 | Hardware

Custom gaming computers are sometimes hard to come by, especially if you donâ€™t have any references or places to look. eCollegePC is one of a few online resources where you can custom-build your own gaming computer, at good, cheap prices. This article will tell you a brief overview of the process of building a custom gaming computer with eCollegePC.

First, what youâ€™ll do is come to our online store. Everything is based online and communication is done through email. You will find the section that is entitled â€œADM-Basedâ€• computers and then under that section, youâ€™ll come to â€œGaming seriesâ€• or â€œCustom builder.â€• You may wish to check o series computers first, so that you can get an idea of what put-together computers may be like, before you go and design your own in the custom builder.

Next, if youâ€™re in the custom builder mode, youâ€™ll choose a platform, or a foundation for your computer. It will be an ADM or basic brand. Then youâ€™ll be taken to a page that allows you to select and specify the central processing unit; the heat sink and fan; the motherboard; the memory; the hard drive; the possibility for a second hard drive; the CD and DVD drive; your video card (with an option for a second video card); the operating system; software; monitor; case; power supply; networking; wireless networking for internet ease of use; sound card; speakers; floppy drive; keyboard; mouse; card reader; case fans; neon lights; thermal display; media center; IEEE1394; wiring; and warranty. If there are any questions about the different parts of the computer, simply send an email to eCollegePC and we will be able to explain to you exactly what goes into the computer and which parts will effect which processes. If youâ€™re interested in good controls for the video games youâ€™ll be playing, of course youâ€™ll want to pay attention to your keyboard and mouse. you want to make sure that more detailed games will be able to run on your computer, youâ€™ll want to ensure that you have a good video card and a good hard drive to handle all of the data.

There is admittedly a lot of steps that go into making a custom gaming computer, but overall, if you ask the questions you need to have answers to, and you are able to decide, youâ€™ll most likely end up with something you can use well and will last you a long time.
