How to identify a good Laser Printer Toner by Avena Sowell

Article published on February 15th 2012 | Hardware

Gone are the days when people used those bulky dot matrix printers in home or office. Big rolls of paper, continuous click-clack sounds, change of ribbons, cleaning and so many other things that everybody now wants to forget. The reason being people have better choices; they have laser printers.

Toner is a fine carbon powder used for printing on paper in laser printers and photocopiers. A laser printer is an enhanced version of basic printers which produces high quality printing. A Laser Printer Toner employs photo conductivity where a laser beam projects an image on the paper with the help of organic photoconductors. Electrical charge leaks when it is exposed to light from the drum which is attached to the beam. Once the charge is exposed to light, the image or the text on the paper is copied and produced with high quality.

In simple terms, toners are polymers which are well mixed and grinded to form smooth powder material. In earlier days, toner was poured in a tube in the printer and used from there. Today, a Toner Cartridge is used instead. A Toner Cartridge can produce different colours too.

With technological advancement in electro photography, laser printing has seen major changes. Some new options are available for toner cartridges which are cost effective and give fine quality of printing. Earlier toner cartridges were so costly that people preferred to buy a new printer to changing the cartridge. Today, remanufactured, re-filled and compatible toner cartridges are available in the market.

Laser printers are used heavily in offices and homes for high volume printing tasks. The printers are more cost-effective to use than inkjet types.

Choose wisely or Toners will frustrate your business

When most printers begin to malfunction, the Ink toner is culpable most of the time. A bad toner will yield poor quality prints, not to mention the unnecessary maintenance issues that go along with it. You can always check, especially if you are new to printers, and see if the manufacturer of your Ink Toner meets industry standards. For starters, there is the ISO certification that guarantees manufacture of your toner confirms to best practices.

Toner capacity determines how long you can use it high volume business printing tasks. If your business requires high volume printing capacity, you may want to buy a toner that does not call for replacement every now and then.

How about customer support, warranty etc? A good supplier is always present to answer queries you may have regarding his products. You may want answers about toner compatibility, usability, quality etc. At the same time, you need to access technical support for malfunctioning Ink Toners. If the toner fails to meet expected print quality for no fault of your own, your supplier you should have no problems replacing it at your convenience.

At the same time, the internet is packed with product reviews that may offer useful insight on reliability of any item you purchase. Thus, you may check out toner reviews for your particular model to see what other users have to say about it.
