Article published on March 9th 2012 | Hardware

We all know that there are a lot of computer words used in computer universe. Laptop repair term is very commonly used these days. Laptops are small or mini computers that are all-in-one machines. When there is an issue with this kind of machine, laptop repair is the name users will be using when it comes to fix it. The second term used for these machines is notebook or net book repair. Notebook (This term is used for laptop computers) or net book, are small laptops. Laptops are portable that means laptops can be used in many places inside or outside the house.

Computer repair term is used to refer to any computer like a desktop, laptop or any other computer like Apple machines. There is a sub-term that is also used, called PC repair. So whenever there is a problem with a PC i.e. a desktop or laptop, users can use the term computer repair.

Data Recovery is another very hot name used in the world of computers. Whenever there is a problem with a computer, there is always possibility of users having data on them. So users, use computers for storing personal or business information. When a computer or laptop malfunctions, the personal information becomes inaccessible for a normal user. In this type of situation, data recovery is the term used to recover data from these machines.

Mac repair is another popular term being used in the last one decade. Mac computers are made by a computer company called Apple. These machines are usually considered very stable but nothing is ever- lasting. These machines also die and the Mac repair term is used in those cases.

Printers are used for printing information out of computers and laptops. These machines use paper for printing and are a good source of black and white records. This term is also very popularly used in computer universe.

Hard drive repair, some people used this term, to refer to computer tower or desktop. In real this term means a small piece of hardware that is used to store all information inside a PC or laptop. USB drives also called as USB flash drives are an excellent invention, to store data for mobile use. Before USB drives, people would use floppy diskettes or CDs or DVDs. The main advantage of USB flash drives is, it is faster to save data on it and also these can accommodate more data. A USB drive is a small part similar to the size of a thumb. It comes in different capacities.

Computer LCD screens are used as monitors with computers. LCD screen is a new type of technology that replaced old type of huge computer screens. These are light, thin monitors which have high resolution, better screen quality and are more human vision friendly.
