OEM Canon Ink Cartridges for Better Productivity and Flawless Printing by Richard Donna

Article published on January 11th 2012 | Hardware

It is certainly true that OEM ink cartridges are better consumables for your printer. Canon ink cartridges are not exception to this observation. Most third-party manufacture products cause damage to the delicate interiors of the machine, and the problem is not just a leakage issue but rather with the ink itself. Thus your printer ended up on blink with the use of aftermarket ink cartridges.

People generally believe that all ink is created equal; this is not true. Many of the printer users who have tried out the cheap ink refill kits from brand stores or the refurbished ink cartridges on the market have discovered the truth and took the pledge not to use non-brand printer ink supplies ever again. The products work poorly and fail to match the brand quality specifications.

Many aftermarket ink cartridges tend to leak because they are basically manufactured from recycled materials and are improperly tested and cleaned. A leaky ink cartridge unit creates a mess and eventually damages your printer beyond repair. After all ink is a liquid substance and a printer is electronic device, if the liquid substance gets into the wrong parts, your device can easily be spoiled. Moreover, when you use a non-brand refill it will not fall under any warranty.

The other major issue that you may encounter for not using the proper OEM refills is the ink itself that is of inferior quality and yield poor quality print outs. The ink used in many refill kits and refurbished cartridges are sub-standard and does not meet quality specification. The consistency is not well-maintained- the ink is either too thin or too thick and can damage the delicate parts that are particularly made to spray the ink in certain ways and patterns to print pages.

Inks that are too thick can clog up the delicate parts and come up with a blemished print as well as damage the printer parts. Again, inks that are too thin will tend to run and ooze and cause other issues with the printer.

Finally, the greatest issue is printing quality. Most printer users who choose to use aftermarket inks may have noticed the overall quality of prints is poor and it is no way what they expect from their device. Also with the aftermarket inks you get pale colors and blurred edges, and cannot use it for professional purpose.

Canon ink cartridges are manufactured specifically for Canon printer and the inks that are used are specifically formulated for the proper functioning of the printer. The high quality formulation is made to restore the colors of your graphics as well as sharp and clear letters for your text.
