Printed System LTD â€“ quality LED assembly with the latest, sophisticated methods by James Blee

Article published on August 14th 2012 | Hardware

Specialising in some of the best LED assembly, Printed Systems LTD are a company who pride themselves on their ability produce some of the most reliable and efficient products.

Unlike other company who undertake LED assembly, the LED Assembly from Printed Systems LTD is undertaken by a skilled and dedicated workforce, well trained in their field and knowledgeable in all the latest LED assembly production methods. Aiming to have a rate of zero defects in the future, Printed Systems LTD have put in place achievable goals and are continuing to invest in both new and better LED assembly equipment and new, skilled personnel.

Established in 1999, Printed Systems LTD have had over ten years to perfect and develop their LED assembly and can now boast of having some of the best LED assembly methods and electronic contract manufacturing services of any printed circuit board company.

Getting a little technical for those uninitiated in the art of LED assembly, utilising some of the most sophisticated LED assembly technology, Printed Systems LTD work to check the moisture sensitivity and that the correct reflow profile is selected. Once the reflow process has been completed, a light-up test is then performed.

Utilising the latest pick and place mchine in their LED assembly, Printed Systems LTD are even able to produce PCBs of up to 1.6 meters in length â€“ quite an astonishing feat, and unsurpassed by any other LED assembly company.

In addition to their LED assembly, Printed Systems LTD also specialise in other, closely related fields, undertaking surface mount assembly, unit assembly and as well working on design for manufacturing.

To find out more about the LED assembly from Printed Systems LTD, visit them online today and ensure that your products benefit from some of the best quality LED assembly currently service the production industry.
