Projector Bulb for Clear Presentations by Elctrosonic Lamps

Article published on March 13th 2012 | Hardware

Projector Bulb is available in different sizes and patterns. Power and output totally depends on the brand you select for your needs. It is an essential tool if you are conducting business presentations on daily basis. Clarity and overall viewing can be enhanced by using a powerful bulb. Flat screens are preferred than bubble type screens which cannot accommodate the entire image. Also the chances of lessening the distortion level can be acclaimed by installing a high quality projector bulb. If the audience is seated in a wide type configuration then use of such bulbs plays an important role. These bulbs are made out of high quality metal halide lamps which improves the overall clarity of the image, white light is produced when these halide lamps go live.

There are various brands available in the market which can be selected as per your needs. You might have to search them well before you wish to invest; internet can be termed as the preferred source. There are thousands of brands which are registered over the internet; you can get complete information about these brands that will provide you top notch products and service. You can expect these bulbs to be active for 1000 to 2000 working hours; well this output totally depends on the brand you wish to select. If you select a high quality brand then expect the number of performing hours to go up. SVGA is the stock configuration for a basic presentation; the resolution will increase if the presentation has more audience and service area.

Another striking feature of these bulbs which needs to be considered is the brightness and color options. Colors play an important role in displaying images. Maximum colors are preferred when it comes to clarity, HD or high definition images will do justice if the audience and service area is more. Home theater is another application area of these projector bulbs. They are reasonably priced when it comes to home theater systems, the reason being viewing audience would not be more than 5 to 7 people and the service area would be around 10 feet wide. In such scenarios a basic lens will help a lot to cover the area of projection.

Prices of these bulbs can fluctuate as it totally depends upon the quality and brands you prefer. Size also plays a major role in the overall performance, if itâ€™s too huge then adjusting the projector and alignment will spoil the clarity. Projector bulb requires very less maintenance, you need not spend much to keep it alive and working. In most scenarios expect the bulb to flicker which is a sign of replacement. Also, there are chances where you might not have to replace the bulb even after exhausting 2000hours of service. Temperature and external surroundings affect the overall performance of the bulb. Cooler environments increase the overall performance of the bulb, absence of stress ensures it performs well.
