Smart Proximity Cards Sort out Complex College Security Programs by Michael Sumner

Article published on June 26th 2012 | Hardware

Colleges must deal with a very complex security setup that includes a combination of physical access control to buildings and labs as well as logical access control to virtual intelligence and internal networks. The underlying security solution must not interfere with providing convenient and functional procedures for a blend of administration professionals, educators, students, and other individuals on the campus. More and more often, proximity cards are being used in these types of settings with great success.

For a truly diverse solution, HID iCLASS contactless smart cards offer a range of possibilities that extend beyond simple proximity cards to applications, which incorporate various other programs into a more comprehensive answer. By incorporating smart card technology, a university or college is able to control a greater variety of security concerns â€“ from access to various buildings, offices, and areas to maintaining an accurate student cantina tab, bookstore account, or even laundry funds. Whatâ€™s more, cards like the 1386lggmn enable custom color artwork to be printed through an easy to operate ID card printer making this solution a preferable application for basic to advanced campus ID cards. Itâ€™s affordable, manageable, and makes sense for todayâ€™s complex security solutions. These card printers have truly evolved in the past decade and are now extremely easy to operate and maintain. Even ribbon changes have been simplified to an easy, drop-in cartridge format.

Imagine the wide range of possibilities:

â€¢ Physical security access to classrooms, offices, labs, athletic rooms, residence halls, and more.

â€¢ Control logical access for student computer labs, networks, and other resources.

â€¢ Proxy cards and smart cards can also be used as student and faculty identification, library accounts, and other student benefits.

â€¢ Cash debit access for cashless transactions at food service, laundry, and vending machines around a college campus.

Donâ€™t feel alone if youâ€™re attempting to upgrade an existing security solution. There are a number o top manufacturers available to help and youâ€™ll find the leading companies on www.IDcardprintersavings.com.
