Article published on February 21st 2012 | Hardware

Day trading is and always will be a large field that employs many. This has given scam artists and other folks the opportunity to prey on day traders who need computers for trading, the livelihood of their trading business. Not all trading computer Web sites are scammers, but a lot of them donâ€™t know the kind of power you need and sell day traders trading computers that are lower quality. Itâ€™s important that you have a trading computer setup that includes a powerful desktop with multiple monitor screens.

One of the biggest mistakes that day traders make is buying computers for trading that have lower-end processors. With the older model processors, even some of the i7s, arenâ€™t able to provide the ultimate performance that you deserve. Youâ€™ll need something with lots of cores and threads to run everything smoothly. The memory RAM inside of your trading computer setup should also be sufficient enough to handle running multiple programs at the same time. Day traders have many different applications and windows open at once, and when your memory RAM and processor canâ€™t handle running them all simultaneously, they began to slow down and malfunction. And once this happens, youâ€™ll have a delay in receiving your real time data, which is crucial to your day trading business.

The Web sites out there that offer trading computers, sell these types of PCs and whatâ€™s worse is that they are overcharging for these machines. You shouldnâ€™t have to pay thousands for a trading computer that doesnâ€™t even give you the full power potential that you require.

The trading PC that you buy should have the best processor on the market, plenty of memory RAM, terabytes worth of hard drive space to store all of your data and caches, and a graphics card that will allow you high definition visuals of your applications. This will also ensure that your multiple monitors are all synchronized and display your data crystal clear.

The multiple monitors that you purchase can be from any brand, but the best thatâ€™s out there today come from Asus and Samsung. Itâ€™s important that all of your monitors are the same exact model, so to ensure this, you should purchase them all at the same time from the same manufacturer or distributor.

Youâ€™ll need to do your research about what makes a great computer for trading before you buy anything. Thereâ€™s a boat load of info that you can find on the Web to help steer you clear of scammers and low quality PCs.
