The all-in-one printer is your flexible friend by [Anne Mary](#)

Article published on January 14th 2012 | [Hardware](#)

Technological advancement has seen the simple printer, become a refined and polished machine of terrific versatility, which is now a vital element in the home computer set-up. The manufacturers are competing with one another to develop the best possible piece of equipment, and all this is great news for the consumer, as the choice is many and varied, meaning the ideal device is out there for each and every one of us. However, deciding on the one that fits closest to our particular needs, means a little comparison exercise may well be required before making a decision.

The leading names have gained those positions in the industry because of years of supplying reliable goods, which customers grow to trust, so the likes of Samsung, Dell, Canon, Kodak, Epson, HP and Brother will all provide excellent quality printers, pretty much guaranteed, but each one will have slightly different specs, and naturally price will play a part in the decision making too. It will all depend upon the needs of each individual, so the better idea you have when beginning a search, will probably mean you can draw up a short list must quicker.

The capabilities of the modern printers is a complete world away from a those of a decade ago, when it was just a matter of churning out documents, until the cartridges emptied. Now it is possible to create material in the home that previously only specialist shops and even laboratories could do for you. Photographs for example, taken from a digital camera, can be printed off and nobody would be able to tell the difference from those sent away to so called experts.

The printers are so flexible and functional, each designed to be energy efficient and save time and money for the customer. From the low cost solutions, right up to the latest state-of-the-art versions, the manufacturers are aware of the competition, so have to be competitive with their pricing. Navigating the printer may be a consideration to take into account, but the vast majority are relatively straightforward, even if the LCD displays on the models with a control panel can be a little disconcerting to begin with, but you will quickly find that they are really helpful in the operating of the machine.

The all-in-one type of printers are increasingly getting the vote of the average man in the street, due to their multi-tasking capabilities. They are able to produce quality written documentation, high quality photographic reproduction, plus they can scan, copy, fax, and some even have the capacity to correspond with other devices, such as i-pads and i-phones and receive e-mails and attachments from anywhere on the planet, plus be part of an exploration exercise to find potential apps. So pretty much everything you require in one single fixture.

Their configuration is simple too, achievable in a matter of minutes, and in addition they offer an extremely convenient cable-free procedure. There are also software tools that can be purchased to make the operation even more seamless. The common printer still exists, but it has grown up now into a sophisticated home partner.
