The Guide to Help You Wisely Choose a Xenon Lamp for Your Projector by Elctrosonic Lamps

Article published on December 26th 2011 | Hardware

Purchasing a projector lamp costs a considerable amount of money. With the advancement of projectors, more and more people are making use of the xenon lamp to get better clarity and long lasting service. This particular type of lamp is essentially a gas discharge lamp that produces a very bright white light. This light comes close to natural sunlight, giving the best comfort to eyes and exceedingly clear picture quality. This is what makes it suitable as a projector lamp bulb.

These lamps are not only used in movie theaters, but also in automobiles. Owing to the bright light it emits, a xenon lamp is considered suitable for night driving. The xenon gas, which is used in these types of lights, is a good conductor of electricity and illuminates brightly when an electric current is passed through it.

What are the advantages of using a xenon lamp?

It lasts longer than the regular halogen lamps that are otherwise commonly used in a projector.

It does not produce as much heat as a halogen lamp, which decreases chances of overheating-related problems that often occur in a projector.

A xenon bulb can also be used in conjunction with a dimmer, which means that its brightness can be adjusted according to specific requirements. In the case of a projector, sometimes you might need bright light and at other times, a dim light will suffice.

A xenon bulb also has a rather long lifespan. It will last for almost 2,000 hours to 6,000 hours depending on its usage.

Xenon lamps can help you save energy as well as money.

When you are using a Lamp for projector, you need to keep certain additional things in mind. For instance, you should not leave the projector on without reason. This will shoot up your electric bills and even reduce the life span of your bulb. Also, the projector should be kept dust free so that the internal functioning of the device is not affected. Like mentioned earlier, it is also advisable to use a dimmer along with the Xenon lamp in your projector so that you can regular the energy consumption of your bulb.

If you keep these things in mind, you shall be able to ensure the long life of not just the projector bulb, but also the projector itself. In case you are planning to purchase Replacement projector lamp, you should try and purchase a Xenon lamp, it is advisable to run an internet search to look for reputed dealers online. There are many dealers who offer guaranteed products and competitive pricing.
