Article published on January 25th 2012 | Hardware

Most businesses today are using SFP transceivers for their business solutions. Small form factor pluggable transceivers are both efficient and inexpensive. SFP transceivers connect the main hub to network cables. Businesses use this module because of its capabilities and price. The GBIC module is also popular with offices. The GBIC transceiver is larger in size but still just as efficient and affordable. It will be crucial that you know your optical options if you are a first time buyer. No matter what your business or personal spending, you want a transceiver that will do the job without you having to spend a lot of money.

All types of optical pluggable modules transmit and receive optic signals, which is why they are also named transceivers. Transceivers support your companyâ€™s network solutions in a cheap way. Modules are all developed under the multi-source agreement set by industry standards. They are all grouped together by their quickness, rates, and wavelength ranges. SFP and GBIC transceivers are 1Gbps receivers, while XFP and Xenpak transceivers are 10Gbps. Most merchants will carry all types of transceivers, and should be able to assist you in finding what will work best.

You will have to choose which optical transceiver will work properly for you. All transceivers are inexpensive, but work differently. GBIC optics are one of those options. GBIC modules are input/output modules. This module links the fiber optic networks to the main Ethernet port. These are grouped by their working distance, power, and speed. These transceivers save you money and time. Being hot pluggable makes them quick and basic to change.

With SFP modules, you are basically getting an updated generation of GBIC modules. Cisco SFP modules are only about half the size of GBIC pluggables. They are also extremely effective and affordable, making them perfect for businesses. Like GBIC, they are classified by range, speed, and power. These hot pluggable optics are basic to maintain and change.

The transceiver module field can be hard to understand. First, you want to know exactly what you need. Finding a merchant with optic network experience will be critical. Professional merchants with knowledge will be able to help you with any technical concerns or questions that you might have. They will be able to provide you with a wide range of choices along with the best prices and the best support.

Your business needs to run smoothly at all times. This makes getting the most efficient modules for your network crucial.

Tony Farinholt - About Author:
FluxLight was founded in 2003. Our focus has been on providing quality fiber optic interfaces, a SFP modules, a Cisco SFP modules, GBICs, and related products for local and wide area networking products. We stock optical transceivers from top vendors. FluxLight is convinced the path to success is through excellence and customer service. Our customers are our number one priority. We know you have many choices of where to buy so we do our best to provide the best SFP and GBIC products, at the best prices with the best possible support.

Article Keywords:
SFP modules, Cisco SFP modules
