Article published on June 12th 2012 | Hardware

The sound quality of your audio device depends on the sound quality of the speakers used, which in turn will depend upon the speaker cable used to connect the device and the speakers. When looking for a speaker cable, you will come across a number of options. There are different speaker cables available for different devices. For achieving high sound quality, the speaker cables play a very important role that many people don't recognize.

In order to understand the importance of right speaker cable, you need to consider these cables as the arteries of your home theatre system. The way arteries carry blood throughout your body, likewise speaker cables carry the audio signals to various speakers and determine their sound quality.

Since there are a number of manufacturers for these cables, it might be difficult for you to decide upon any one. Apart from the wide variety of options, the cost of these cables also varies greatly. And sometimes it gets difficult to decide which one to buy, the expensive one or the cheap one. Here are some of the tips that will help you guiding through your speaker cable purchasing process.

â€¢It is important to know that the speaker cables have a resistance of some degree. The thicker the cable, the lesser will be its resistance; therefore, you should buy a cable that comes with a decent gauge. Thicker cables are far more expensive, whether you try to buy them from a store or from an online website.

â€¢The longer the wire, the higher the resistance. So, it is wise to choose thicker cables for long distance connectivity.

â€¢Before buying a cable you should make it a point to measure the length of the distance the cable is required to cover, which can be easy done with the help of a measuring tape.

â€¢Another thing that you need to keep in mind is not to buy a cable just because it is expensive. You should give more preference to quality than price. Good quality cables are made from high quality metals for enhanced signal transmission and better conductivity. They also offer higher protection against interference.

â€¢It is very confusing for some people to decide about a speaker cable having a connector at its end. If a speaker cable has a connector it becomes easy for you to connect or disconnect it. However, when it comes to sound quality, these connectors will be of the least importance. If you want to get added convenience, it would be better to buy cables with connectors.

If you are aware of all the factors that are needed to consider before buying speaker wire, you will surely get the best buy. You can also research online for gaining knowledge about each and every aspect of speaker cables. You will find all the necessary information available on the internet that will help you make a wise and economical decision while buying the most suitable speaker cable.
