Toner Cartridge Recycling Keeping the Environment Clean & Green by Julia Roger

Article published on May 24th 2012 | Hardware

Toner cartridge recycling, or simply toner recycling is a procedure that opts for collection of empty cartridges and then resold for remanufacturing purpose. There are certain third party manufacturers available who purchase these blank printer cartridges and use them for recycling as well reusing purpose.

Remanufacturing steps vary from one manufacturer to another. However, sorting is one of the most common methods to follow. There are certain methods that are involved in order to ensure that proper quality control does take place. Moreover, additional effort is given on cleaning of the toner. Without proper cleaning, it is not proper to refill a toner. Recycling of toner & print cartridges is totally environmental friendly. A recent survey conducted highlights the fact that around 800,000,000 blank cartridges gets thrown away every year within the United States of America. The terrifying fact is that it takes around eight to ten years for one single blank cartridge to get decomposed! So, it can clearly be seen that environment pollution takes place in a severe way.

toner cartridge recycling has a positive impact on earthâ€™s environment. It helps in cutting down the cost, helps in conserving all the natural resources of Earth, and reduces waste dumping in landfills. It is always a cheaper procedure to recycle materials rather than purchasing the brand new ones. Presently, around 97% of cartridge parts are recycled for remanufacturing purpose.

Have a look at the recycling procedure in brief:

At first, sorting of cartridges take place after they arrives from supply store. Then, the damaged cartridges are totally thrown away. The ones that can well be refilled are kept in possession. Those toners/cartridges that meet the desired quality standards are cleaned properly and then refilled. However, it is necessary to test the ink before refilling. Is the ink fully compatible with the cartridge? This question should be sorted out properly before refilling takes place.
