A Look at Eye Care: Disorders and Disciplines by [Vincent Davis](#)

Article published on February 15th 2012 | [Health](#)

They can also help convey your feelings without talking. People can tell if you're actually sad, happy, or angry by just looking at your eyes. Taking care of one's eyes is crucial, as your sight is crucial to your daily life.

Studies indicate that refractive errors—eye defects that can be corrected by eyeglasses—are the most frequent eye problems in most parts of the world. The most ordinary includes myopia (nearsightedness), hyperopia (farsightedness), astigmatism (distorted vision at all distances), and presbyopia (loss of the ability to focus up close). The latter usually occurs in men and women between 40-50 years old. According to research, proper refractive correction can enhance the vision of millions of people 12 years and older.

Other ordinary eye disorders include macular degeneration caused by old age; diabetic retinopathy; cataracts and glaucoma; amblyopia; and strabismus. These problems typically require more comprehensive medical attention to cure and/or remedy.

If you have an eye issue, then you need to see an eye expert. However, you may have trouble telling an ophthalmologist from an optometrist or an optician. Although they are complimentary disciplines of eye care, they all focus on a different part of eye care. An ophthalmologist is a physician who focuses on surgery and medical care of the eyes. He/she also helps in preventing eye diseases and injuries. Optometrists are basically health care providers that diagnose, treat, and monitor various eye disorders that also affect related structures. On the other hand, an optician is someone who fine tunes and fits optical products such as eyeglasses.

These three jobs are, as mentioned, interrelated. An ophthalmologist may direct you to an optometrist who can prescribe the right eyewear for you. Thus, eye care centers in Canada usually have an ophthalmologist who refers patients to an optometrist Langley families trust.

Eye care professionals should be available under one roof for the convenience of patients. Getting the right eyewear for your personal needs is easy thanks to every dependable optometrist Langley BC eye centers are proud to have.

Patients who go to these eye care providers are checked by an ophthalmologist who, if necessary, will refer them to an optometrist. The optometrist then makes the appropriate diagnosis to figure out the type of glasses patients need. The optometrist may refer patients to an optician Surrey eye care centers have to make certain that the prescribed eyewear has the right fit. In all instances, patients are assured that correct procedures are followed to deal with their eye defects as conveniently as possible.
