Are You Using a Secure Anti Aging Face Cream? Get the Actual Facts by [Tedd Woods](#)

Article published on July 3rd 2012 | [Health](#)

What should you look for in anti aging face cream? Do they really work? What are the most secure ingredients? Which ones are most effective? Let's try to response some of those concerns.

An anti aging face care lotion should have the weakest, most secure and most efficient substances. They should have scientific studies and analysis to compliment their statements of efficiency. Safe substances are flower types, natural vitamins, nutritional value and other nutritional value. Perfumes, salt, alcohols and oil based items should be prevented.

A new substance for anti aging lotions is produced from sheep's fleece coat. Most aesthetic substances are resulting from hooves, horns and cowhide. Which is smoother, fleece coat or leather? If your epidermis looks like natural leather, then you've got a issue. So, it just is practical that the sheep's fleece coat draw out would be more efficient than the cow cover up mixture.

The new substance is so just like a aminoacids discovered in "people skin" that your body can't tell the change, so it seeps it up and uses it to restore epidermis tissues and fix harm done by the sun. It is known as efficient keratin and it is only discovered in the best items.

Another factor that you should look for in an anti aging face care lotion is an element known as wakame or phytenessence wakame. It is an antioxidising resulting from Japaneses sea plankton. Today revealed that it defends the epidermis against harm from UV light, but without the possibly side results of SPF lotions. It also defends against ecological toxins, such as cigarettes. If you perform in a bar, it's probably the best choice.

The other factor that wakame does is restrict the action of an compound known as hyaluronidase, which smashes down the skins important aminoacids acidity hyaluronic. It is know that levels of acidity hyaluronic fall as a person age groups. So, an anti aging face care lotion might list acidity hyaluronic on its brand.

The issue is that synthetic alternative is never as excellent as security and improving development. So, most of them are worthless. This phytenessence wakame stops natural shops of acidity hyaluronic from being exhausted. The aminoacids holds bovine collagen and elastin materials together, kind of like stick, so when it is missing, under eye groups appear and flexibility is decreased. Skin tissues can not be changed effectively and facial lines appear.

You will not find wakame in shops. Maybe, if you live in Asia, but not in the Combined Declares. The ones that have it are only marketed straight from the maker. It's too expensive for suppliers, because they can't level it up and still have an cost-effective product.

Which anti aging face care lotion is the most effective? First, let's look at substances that are not efficient. Collagen and most types of keratin are not efficient. A variety of COQ10 and supplement E is very efficient at ruining free-radicals and undoing harm done by the sun, but most companies that use them don't have the right attention or the right type.

The most efficient anti aging face care lotion will be one that contains the efficient substances described here at a high attention. At least 50% of the content should be "active" substances.
