Best Tips for Rhinoplasty by Julia Roger

Article published on June 7th 2012 | Health

More and more people are getting aware of plastic surgeries that can improve their overall appearance. Rhinoplasty is one of the most common types of plastic surgeries and anyone who requires nose jobs should elect rhinoplasty. Here are discussed some important tips for nose jobs which will help you in the procedure.

You should know what changes you are looking for and how your nose should be changed in the surgery. It is best if the patient is aware of the results and make sure to discuss everything in detail during your consultation visit.

People above forty years of age should consider twice before having any kind of nose jobs. Usually it takes a lot of time to get accustomed to new look and for people above forty, itâ€™s really hard to adjust with their new face.

All the nasal medications should be stopped three months prior to your nasal surgery as these medications may affect your surgery.

Get a nasal saline spray and humidifier to keep your nose moist after the surgery. Use these sprays for nearly two weeks after the surgery and even more if you are not comfortable.

The best way to avoid swelling is to sleep on pillows with your head elevated or you can even sleep in a recliner. Make sure to use ice and it will help in keeping the swelling down.

In some case, you may need revision therapy to correct any kind of unpredicted results out of your nose surgery. Nose surgery is difficult to perform and you have to agree with this risk before having the surgery.

There should be proper gap between your surgeries and revision surgery, if needed; then make sure to wait one year for atheist. Surgeries with small period in between may not provide desired results.
