Beverly Hills Plastic Surgery - Understanding Liposuction Advancements by Robert Applebaum

Article published on July 24th 2012 | Health

With the arrival of summer comes an influx of prospective plastic surgery patients inquiring about liposuction procedures. Despite the recent media attention to liposuction advancements that â€œfreeze the fatâ€• or can be â€œperformed during lunch hour,â€• it is crucial for prospective patients to remember the most effective advancements in liposuction technology have been in place for the last 15 years, and those are the technologies to look for when selecting a plastic surgeon.

One major advancement in liposuction technology is the use of a tumescent solution, which constricts the blood vessels around the fat cells so that the patient loses significantly less blood during the liposuction procedure. When youâ€™re assessing your liposuction options, make sure to find a physician who applies a tumescent solution prior to surgery â€" this small step is crucial to your safety and is practiced by Dr. Robert Applebaum, an American Board of Plastic Surgery certified plastic surgeon located in Beverly Hills,in all his liposuction procedures.

The second major advancement in liposuction technology is the use of smaller cannulas. When liposuction was first performed, the cannulas (the metal rods that capture the fat with suction pressure) had a much larger diameter, often leaving undesirable waviness and indentations on the patient after the procedure. By using small diameter cannulas, a surgeon can sculpt artfully and remove the fat with more precision during your liposuction procedure. These small diameter cannulas are one of the most effective advancements in liposuction, as theyâ€™ve given surgeons such as Dr. Robert Applebaum more control over the aesthetics of a patientâ€™s results.

There has also been a lot of media attention about technology such as lasers, ultrasounds and vibrations and its ability to enhance the effects of liposuction. However, clinical studies havenâ€™t demonstrated clear advantages of these methods. Lasers, ultrasound and vibration techniques shouldnâ€™t be marketing tools to convince a patient to undergo liposuction. By using tried and true technology such as the tumescent solution and small diameter cannulas, an effective, well-trained plastic surgeon such as Dr. Robert Applebaum will be able to provide patients with liposuction procedures that result in natural looking contouring that truly fits their needs.

If youâ€™re looking for a liposuction procedure in Los Angeles or Beverly Hills,Dr. Robert Applebaum is a trusted, reputable choice with the safest, most effective methods of performing plastic surgery procedures including liposuction, breast augmentation, breast implants, boob job, breast enhancement surgery, silicone gel implants, silicone implants, silicone breast implants, saline breast implants, saline implants, breast feeding with breast implants, mastopexy, breast lift, breast lift with placement of a breast implant, breast enhancement surgery, silicone gel implants, saline implants, Vertical Breast Lift Technique, optimal nipple position, reduction mammoplasty, breast reduction, implant removal, implant replacement, capsulectomy, capsulotomy, implant encapsulation, implant hardening, nipple deformities, correction of nipples, inverted nipples, gynecomastia, excessive male breast tissue, male breasts, secondary breast implant surgery, implant malposition, nipple inversion, prominent nipples, nipple sensation, symmetry correction, asymmetry correction, congenital asymmetry, surgical asymmetry, implant pocket malposition.
