Cataracts Treatments for Dogs using Ethos Eye Drops to Cure Cataracts and Glaucoma by [Ethos Eyedrops](#)

Article published on April 13th 2012 | [Health](#)

A revolutionary new treatment for Cataracts of the Eye has been gaining in popularity in both the States and Europe since it was featured in the UK on the Richard & Judy Television Show with amazing results. Ethos claims 'This could mean an end to Cataract Surgery'. The product, called Ethos Endymion "Bright Eyes", uses a special derivative of the naturally occurring neuropeptide L-Carnosine, called N-Acetyl-Carnosine (NAC), which is a super antioxidant and anti-glycating agent. NAC, when topically applied, can penetrate and protect the lipid tissues of the eye against light damage and also helps to diminish free radical damage and the harmful effects of glycosylation associated with degenerative eye disease.

In an animal study, scientists from the Department of Veterinary Medicine, University of Cambridge, found that NAC Eye Drops for Cataracts Treatments were also effective on several breeds of Dogs with Cataracts. It is well known that dog eyes are very similar to human eyes, and that any changes or benefits relating to a particular product used on Dogs Cataracts is virtually guaranteed to have a similar effect on human eyes too.

The scientists administered NAC Cataract Drops three times a day to all of the dogs in the study and then examined their eyes at two, four and eight weeks. They found that significant improvements in relation to lens transparency took place, which resulted in improved vision especially in the early stages of the disease.

So the Eye Drops for Cataracts Treatments are not only designed to help people with Cataracts; they are helpful in Cataracts for Dogs and Dogs Cataracts After Surgery as well. The Cataracts Drops are specifically designed for people or pets and are 100 percent hypoallergenic. They can effectively Cure Cataracts Blurred vision for Dogs without surgery, which saves time and money. Surgery for pets is often just as expensive as surgery for people. With the eye drops, one can help their pet's eyesight improve without costly surgery.

Maintaining our pet's eye health is a major concern as they age. As they get older their eyes have a harder time fighting off free radicals that cause oxidative stress. This highly oxidised environment within cells comes about as a result of a chemical reaction from exposure to oxygen and sunlight. Since the lens of the eye acts as a light shield for the retina, it's no wonder it takes all the oxidative punishment. The destructive action of free radicals (they are oxidising agents) also destroys enzymes that are needed to maintain cellular metabolism. And, since blood flow decreases with age, the eye is further deprived of other essential nutrients for health.

Although many praise the benefits of dietary supplements, another way of preventing and treating Cataracts for Dogs, Cataracts Blurred Vision, Dogs Cataracts, Cataracts After surgery, Cataracts and Glaucoma is through topical solutions.

Ethos Endymion Bright Eyes Cataract Drops for pets is one of the most advanced eye formulas that offer protection from free radicals because of its unique formulation of lubricants, an anti-glycating agent, and antioxidant. Glycation occurs as a result of nonenzymatic binding of sugar to protein, which eventually leads to tissue damage. It's a condition that increases with age.

The newly formulated Endymion Bright Eyes Cataracts Drops for pets contains 1% N-Acetyl-L-Carnosine, a naturally occurring antioxidant and anti-glycating agent that, when topically applied, can penetrate and protect the lipid tissues of the eye against light damage. Bright Eyes for pets will

help to diminish free radical damage and the harmful effects of glycosylation associated with degenerative eye disease.

So let your pets rediscover the world around them with their improved eyesight without any surgery.
