Article published on May 2nd 2012 | Health

Alopecia Androgenetica is a condition of hereditary progressive hair loss, where the word Alopecia hair refers to â€œhair lossâ€• and the word Androgen refers to â€œallergyâ€•. Alopecia Androgenetica bei stubborn progressive condition of hair loss is mostly caused due to hereditary reasons also known as alopecia genetics, but then is also driven by the androgen hormone DHT or Dihydrotestosterone. The main problem with this alopecia hair or alopecia genetics is the fact that it does not take age into consideration. The main cause of the same being the fact that it can impart hair loss on people as early as in their early teen ages.

The cause:

The main commonly known cause of this condition that may not be deadly, but has a large contribution when it comes to reducing the confidence level of the one having this problem is known to be completely genetic. There are other factors too though that are considered external and thus contribute in making the things worse. Few of them are stress due to emotional shock or surgery, the physical decline due to breastfeeding, some diseases of the hair, wear from pollution or even poor diet.

The cure:

The best thing though is the fact that Alopecia cure is possible by studying carefully Alopecia genetics and Alopecia Cause. The effects of Alopecia Androgenetica can be reversed safely without much of a surgical treatment. Though it is true that a lot of natural Alopecia cure have worked for many, but the fact still remains the same that they have not been tested on the base of scientific formulas to give proven results that have been provided by their manufactured counterparts. Few of these natural remedies include things like rubbing olive oil in the area or patches of thinning hair. One of the other very commonly used natural remedies include creating a tea-like solution including mustard seeds and rosemary to be sprayed on the hair on a daily basis.

The only difference between alopecia and the commonly used term hair loss is the fact that, the former being a medical terminology is always only used by those with medical background and the latter is normally used by any common man or woman on the side of the streets while referring to any form of alopecia cause. A hair doctor or a trichologist is normally the one who would prefer using the term rather than any one else.

Mostly termed as the male pattern baldness alopecia androgenetica is a very common condition that has been in the male population since days back in the early civilization. There are reasons to believe that the problem might have been there since days back before the stone age. The problem though was not considered very big due to the lack of information on the topic, the recent times have seen more and more concern on the part of the human society when it comes to hairloss. The last fifty years have seen a significant increase in the level of the medication available as far as the problem of alopecia hair is concerned.
