Control your Constant Urge to Attend Nature's Call with Botox [George Benson](#)

Article published on January 23rd 2012 | [Health](#)

My grandmother had this constant urge to attend the nature's call every now and then and when she used to go there was at times no call. This seemed to irritate people at times and also her to a great extent. As she had to go to the toilet at least 20-30 times a day which was definitely not natural and it was a very disturbing factor in her life. We took her to a lot of doctors but nothing seemed to work they all gave her some home remedies or some temporary treatments. Some even went to the extent saying to reduce your drinking water or control.

Age was not on her side for sure to control these urges and she had to attend to them. But one doctor suggested us to get the botox treatment on her bladder. We were shocked as we heard it for the first time as to botox being performed not to enhance your beauty but to control your nature's urges. So the doctor tried the botox injection on her bladder. The entire procedure was conducted with the help of a local anesthetic, it was a bit uncomfortable but with time it was okay and not that painful too. The entire procedure lasted for a maximum period of twenty minutes and after the procedure too there was no pain and the same day she came with us to our home.

But after a few months the effect certainly wears off and one needs to get a touch up of sorts done and so a second round of botox follows soon. Still the change that was experienced after the botox treatment was so relieving and my grandmother again started living a normal life. We usually think that chemical peels Burlington, botox Burlington

will help us in getting rid of frown lines and wrinkles but now this medicine will relieve us of our urinary inconvenience and would treat us in a great way.

It works by paralyzing our muscles and the way it gets rid of the frown lines in a similar fashion it gets rid of the urge to constantly urinate by paralyzing the detrusor muscle. This muscle is one of the bladder muscles and it would make the bladder empty and even an overactive bladder is made to contract the muscles without any specific warning and that causes a sudden rush to urinate. The botox Burlington does not kill the urge to urinate it can just desensitize the urge to urinate. After the botox my grandmother's life changed for the better and she is a happier person. There's more to botox and chemical peels than just beautifying the face and we realized this lesser known fact due to our grandmother.
