Article published on January 27th 2012 | Health

Looking beautiful and youthful is the main motive of undergoing any cosmetic surgeries. The several researches conducted on the North Americans have revealed that most of the Canadians, especially those living in Toronto, are in a habit of undergoing cosmetic surgery to look younger and beautiful than before. The only reason they go for the surgery is that beauty boost smartness in them which helps them to look confident.

Most of the people are seen to opt for the Botox in Toronto. Botox is usually a highly purified protein called Botulinum toxin which is produced by the bacterium Clostridium botulinum. This protein is extremely fragile and helps blocking the release of neurotransmitter that connects nerves to muscles. This in turn doesnâ€™t allow the muscles to contract and therefore goes in the relaxed state. And this very mechanism is used to treat facial problems like wrinkles between eyebrows, crowâ€™s feet, wrinkles around the mouth and on forehead.

Dysport and Xeomin are the other trade names of this protein and are largely used for Botox in Toronto. Another form of cosmetic surgery that is popular is the Lip Augmentation in Toronto. Every woman dreams to have lips which will attract any eyeballs. But not everyone is born with such fuller wonderful lips. For this women could either go for the temporary augmentation or the permanent augmentation. The temporary augmentation just takes around 5 minutes where the surgeon injects filler made of hyaluronic acid that also include Juvederm and Restylane.

Lip Augmentation in Toronto is also a permanent procedure. This needs a little more time where the surgeon uses a lip implant made of silastic to give a fuller look to the lips. It is quite attracting and one could only feel it by pressing the lips between fingers. Patients are of the opinion that after the first few days they even forget that their lips even carry an implant. This is what a scientific advancement can do.

In Toronto Rhinoplasty is also a selected option for correcting the structure of the nose. This can be a procedure to correct nose structure in order to make it more beautiful or a process to correct nasal passage for easy breathing. The surgeons usually do this by trimming the cartilage and the bone that shapes the nose. A good Rhinoplasty surgeon will strike the perfect balance between the nose and the eyebrows that will definitely give your face that real charm.

In the last few years, there has been a gradual increase in the number of Cosmetic Surgery in Toronto. And the technological innovations in the last decade have been an added advantage to these procedures.
