Dental Implants and their Uses Explained by Slidell, Louisiana Implants Dentist by Sharron Dolin

Article published on June 14th 2012 | Health

What are dental implants?

Dental implants may seem like a new tooth replacement option, but in reality they have actually had FDA and ADA (American Dental Association) approval for over 25 years! A dental implant is a small titanium screw that acts as a replacement for youâ€™re the natural root of a missing tooth. Due to the bio-compatible properties of titanium, a dental implant integrates with the bone, creating a sound structure for the new replacement tooth.

Why use dental implants?

â€¢ Dental implants they have proven to be extremely reliable and durable during the 25 years that dentists in the U.S. have been using them.

â€¢ Implants are free-standing and are not dependent on neighboring teeth for support.

â€¢ Dental implant restorations look and act exactly like your natural teeth, but they will not decay.

â€¢ Patients who have Dental implants report that they are virtually pain-free after placement.

â€¢ The jawbone can shrink without the root structure of a natural tooth present. This shrinkage causes your face to appear sunken, making you look older than you are.

â€¢ There are no â€œlooseâ€• parts to worry about unlike bridges or crowns. Dental implants require no adjustment after being placed and are stable and comfortable with no adjustment required Experience has proven that dental implants normally last for decades, possibly a lifetime.

Who places the dental implants?

The Slidell, Louisiana Dental Implants Dentist is a specialist in the placement of dental implants, and we have significantly more experience in implant placement than a general dentist. Your satisfaction, comfort, and the strength and durability of the implant are very important. As the patient, we want you to feel confident that youâ€™re being cared for by a dental professional who can deliver on all counts.

Who is a Candidate for dental implants?

Older patients occasionally express concern that their age may prevent them from enjoying the benefits of dental implants. However, your health is more of factor than age. If youâ€™re healthy enough to have a tooth extracted, youâ€™re probably healthy enough to have dental implants placed.

You may be a candidate for dental implants If you are missing one or more teeth due to injury, disease or tooth decay. The determining factor is the amount of bone available for placement of the implant. Set up a free consultation to discuss your situation by contacting the Slidell Dental Implants office, and we can determine if dental implants are a viable solution for you.
