Discover an Innovative New Technology Designed to Treat Chronic Pain in a Noninvasive Manner by [Linda Moore](#)

Article published on December 24th 2011 | [Health](#)

There is excellent news for anyone who suffers from a variety of painful problems associated with their musculoskeletal system. There is a new, innovative and effective non-surgical way to treat many of these issues, and it is called extracorporeal shock wave therapy, or ESWT. ESWT technology was derived from an exciting and noninvasive technique that was used to disintegrate kidney stones without surgery. This new and innovative technology provides pneumatically generated, very high-pressure acoustic shock waves that are able to travel through your skin to treat the particular area of your body that is affected. This shockwave therapy can help to eliminate calcium deposits in any number of places within your body, as well as stimulate your body's own natural healing process. ESWT is a very inexpensive, noninvasive and effective treatment for people that suffer from a wide variety of conditions with very few side effects.

Shockwave therapy is especially effective for those who suffer from heel spurs, Achilles tendonitis, plantar fasciitis and other issues associated with the feet. Shockwave Edmonton specialists can also treat tennis elbow, golfers elbow and calcific tendinitis of the shoulder, which is a painful lack of movement in your shoulder. Shockwave therapy can also treat your irritation and lack of movement in your big toe, which often results in lower back and hip pain and misalignment. If you suffer from pain and your kneecap, pain while under strain in your shin, or inflamed muscles or tendons in your upper leg, shockwave therapy can assist you with the pain associated with these as well.

Although this is a new and innovative treatment, shockwave Edmonton specialists are also treating number of back pain issues, such as lumbar and cervical spine pathologies, chronic pain associated with contracted muscles, as well as removing undue pressure on the joints, discs and nerves within your back. If you have ever had a broken bone, and it is not healing properly or very quickly, shockwave therapy can improve your healing time and process. If you are suffering from pain, strain or strains in your shoulder, hip, elbow, knee and more, shockwave therapy can help with this as well.

The relief that a shockwave Edmonton specialists can provide you does not end there. Shockwave therapy can also help you with chronic hip pain that is caused by bursitis, flexion extension or other issues associated with your hips. ESWT has also been proven as effective for treatment of myofascial pain syndrome, reducing scar tissue, treating chronic skin lesions, burn injuries, Peyronie's disease and much more. Regardless of the type of musculoskeletal pain that you are suffering from, you do not have to suffer any longer. There are a number of shockwave Edmonton specialists available, that work side-by-side with a number of medical and health professionals to ensure that you are receiving the utmost care in the most professional, safe and cost effective way. This innovative technology can be taken advantage of by you simply by finding a shockwave therapy clinic that has been certified by the International Society for Musculoskeletal Shockwave Therapy.
