Facial Peel the Skin Problems by Tedd Woods

Article published on February 28th 2012 | Health

We all have problems with our skin problems such as blemishes, acne, uneven pigmentation spots, zits, acne, fine lines and wrinkles. These problems are very common in adolescents and adults. However, there are medical procedures that would be useful in eliminating these problems. One example is a chemical facial peel.

Chemical facial peel is a procedure performed by a dermatologist. This is done by using chemical solutions facial skin to remove the top layer of the skin, where the problem is quite visible. When you remove the top layer of new skin will be seen. New skin is now off the problem. In addition, chemical face peeling should give immediate results.

Chemical facial peel has four types of peel. Light chemical peel, medium chemical peel, deep chemical peel acne chemical peel.

Light chemical peel is a dermatologist to use a formula that is based on your skin type to achieve the desired results. It is commonly used to treat skin folds of light, dry in a skin, uneven pigmentation and light acne. The solution used in chemical peels light alpha hydroxyl acid.

Medium chemical peel, trichloroacetic acid used in this procedure. Trichloroacetic acid is highly effective in the treatment of superficial blemishes, fine surface wrinkles and pigmentation problems. The light chemical peeling, it also has less downtime than a deeper peel. This procedure, while patients with a dark complexion.

Take a deep chemical peel, on the other hand, is the strongest of the three peels. This procedure uses a phenolic acid. This is used to remove large wrinkles and age spots.Chemical facial peel has four types of peel. Light chemical peel, medium chemical peel, deep chemical peel acne chemical peel. It is also used to remove pre-cancerous growth on the skin. Although this procedure is much longer than any other chemical peeling procedure, and also require the longest healing time between the three. Phenolic acids are used exclusively in facial peels, facial peels for deep can cause permanent skin lightening. Therefore, people who wanted to carry through this treatment, it should first seek advice dermatologist.

Acne is a chemical peel as a light chemical peel. It uses a reduced concentration of alpha hydroxy acid to remove acne, acne scars and blemishes. The decision may also be mixed with a facial cleanser that is part of daily skin care.

Chemical peels the face gives a quick and effective results. However, before going through these procedures, it should first consult a dermatologist to learn more about it.
