Go for Lasik Eye Surgery in India by [Ravi Kapoor](#)

Article published on December 27th 2011 | [Health](#)

According to researches, it has been seen that refractive error is the greatest cause of low vision globally, and the second largest cause of preventable blindness after cataracts. And it has also been seen that, the effect of low eye sight goes on the works or overall outputs of an individual. There are millions of people across the world who wears corrective spectacles due to eyesight problems.

But wearing spectacles can cause a lot of hassle, depending upon the work culture you are in. People who work on factories or somewhere where a lot of physical movement is involved, for them wearing spectacles and doing work can be a hassle. In such a scenario, undergoing Lasik eye treatment or surgery can be a great solution. Lasik surgery is a more definite solution here.

Details about Lasik:

Lasik is a type of refractive surgery performed by ophthalmologists using a laser which reshapes corneas to sharpen the vision of patients. The technique of laser correction was in process since 1950, when ophthalmologist Jose Barraquer developed the first microkeratome which used to cut thin flaps of the cornea and reshapes it to help the patient enjoying better eyesight.

There are several necessary preparations in the preoperative period. The operation itself involves creating a thin flap on the eye, folding it to enable remodeling of the tissue beneath with a laser. The flap is repositioned and the eye is left to heal in the postoperative period. LASIK is performed in three steps. The first step is to create a flap of corneal tissue. The second step is remodeling of the cornea underneath the flap with the laser. Finally, the flap is repositioned.
