Go for Lasik Eye Treatment in India by [Ravi Kapoor](#)

Article published on December 24th 2011 | [Health](#)

Lasik or laser-assisted in situ keratomileusis (LASIK) is a kind of eye surgery, where the patient has to undergo a laser eye treatment process, in which his/her cornea is re-shaped to proffer better sight. To get rid of eye sight related issues, and to get rid of glasses, there is nothing better than Lasik eye treatment. And as we all know, medical science has been progressing in an unmatched speed, and if thoroughly evaluated and performed, Lasik can help you to enjoy spectacle less life. In most cases, after undergoing Lasik, patient doesn't need to wear glasses. But if the patient is above 40, he/she may need to wear reading glasses that too if both eyes were corrected for clear distance vision.

Lasik is beneficial in more than one way. For instance, one can get laser treatment of both the eyes in same day. And most ophthalmologists suggest getting both the eyes operated in the same day. It saves time & effort as well as patient will not be facing any imbalance between the two eyes. Patient can trust Lasik surgery for longer results. Though this surgery took place first in 1991, so a long data is still not available; but it is a variant of lamellar surgery and patient have not been noted having later issues.

Lasik in India:

Lasik is getting popular in India. There are quite a few eye treatment centers across the country from where you can get the surgery done. Every year a lot of people visit from distance corners of the country to renowned eye clinics to avail Lasik surgery. Medical tourism for Lasik in India is hugely popular and visual care centers of Delhi & Mumbai remain full across the year.

If you are also looking for eye clinics performing Lasik eye surgery in India, you can visit Visual Aids Centre situated at Delhi (South).
