Hearing aids: making sound more clear by Avena Sowell

Article published on February 6th 2012 | Health

A popular quote goes as â€œeveryone wants to go to heaven but no one wants to die.â€• Everyone loves to hear music and listen but when problem arrives; no one wants to accept deafness. While human beings have always succeeded because of the combination of all five senses namely â€“ the sense of touch, seeing, hearing, smelling and tasting, the weakness of anyone of these senses causes ripples in rather a smooth flowing life. For the hearing sense, modern day hearing aids prove to be an abysmal pot for the people suffering from hearing loss of any kind.

Hearing aids are one such thing, which boost up the hearing capacity. Technically speaking, a hearing aid is an electronic device that makes the sense of hearing strong for people with a hearing loss. Hearing aid consists of three basic elements, a microphone-it picks up the acoustic signals from the environment around the person and converts it into electrical signals, an amplifier â€“ it amplifies the electrical signals and a receiver is a speaker which converts the amplified electric signals to acoustic signals for the human ear to decipher.

In the recent years with the development in medical science, a lot of advancement is seen in hearing aids. From the earlier version of hearing aid like ear trumpets and ear horns, in present days a lot of sophistication has come in the tiny hearing aids and hearing aid prices. They vary in power, size and circuitry used. According to the different hearing problems different hearing aids are available.

Phonak hearing aids are the pioneers in flexible and adjustable hearing aids. The flexibility feature includes that sudden loud noises are properly accentuated and soft noises are automatically brought to normal levels for the user. It automatically adjusts loud noises like slamming of doors, mobile ring tones, horns of vehicles etc. and normalises the sound to a low level so it doesn't startle the wearer. The sound classifiers of Phonak hearing aids know that sounds vary in decibels even in one single environment.

Phonak knows that hearing aids are not a luxury item but a need for the people with hearing loss. It has also wireless technologies integrated which allow true stereo wireless transmission of sound through Bluetooth. They also have range of hearing aids which are compatible with free standing FM systems.

Phonak hearing-aid is available in various style, color and unique design have good market-share than competitors. Performance level is far higher than basic level and with guarantee. Program of this Phonak hearing aid can be done without the use of computer.

Above everything, Phonak hearing aids are the only ones which are capable of real time wireless broadband audio transmission and simultaneous processing. It has the largest hearing aids range for any kind of hearing loss.

The hearing aid prices are well affordable and provide quality material according to the market prices. There are different kinds of hearing aids. They are categorized on the way they are worn on human ear. For example: hearing aids can be worn behind the ear (BTE), mini (BTE), in the ear (ITE), in the canal (ITC) and completely in the canal (CIC).

Hearing aids are the little magical devices which change the way you hear the world.
