Human Tissue Bank- the Inside Story by James Blee

Article published on February 15th 2012 | Health

According to a recently concluded survey, human tissue bank are in great demand these days. This is primarily because of the diverse range of services they offer. They are actually engaged in collecting and handling different types of human tissue such as cord blood stem cells, peripheral blood, bone marrow derived type of stem cells, adult stem cells, bone marrow, cornea, hear valves, plasma, sperm, bone, etc.

Today, a large number of people rely and trust on the human tissue bank because of a different reason altogether. It has been found these banks exhibit true characteristics of ethical practices..

With a rapid increase in demand for tissue bank, their processing and storage has occupied a new form of industry. As a result, outsourcing this storage and processing work is slowly and gradually catching up. However, it is not that easy as it sounds to store and process them. In fact, it requires adherence to high standards and guidelines as stipulated by Human Tissue Authority.

Normally the tissue banks are subjected to a tedious process of audit. This audit mainly pertains to the processes that are mostly connected with obtaining and keeping different kinds of licenses.

Moreover, they are required to undertake the human tissue researching the manner prescribed by regulatory authority. Because the maintenance of these standards is turning out to be a little expensive, more and more organizations are choosing to outsource this work. Besides this, there are some wonderful administrative and financial benefits attached with this option that is attracting many organizations to opt for it without any second thought. Generally, this is delegated to some entity that can be trusted and has the requisite expertise with them.
