Laser Cellulite Treatment - Get Excellent Results by Sarah Kathey

Article published on April 18th 2012 | Health

See the effects of cellulite reduce on your body and get excellent results with laser cellulite treatment. Cellulaze cellulite treatment is the most successful cellulite reduction treatment available at present. Cellulite laser treatment with Cellulaze has already proven its effectiveness and has experienced the resultant increase in popularity and acceptance in scientific circles.

The Problem with Cellulite

Cellulite is a condition that is characterized by skin that is dimpled and bulged at certain places and appears more like the surface of an orange peel. It is a common condition among middle aged women and even some younger women. It is not perceived as an abnormality, but its aesthetic issues keep women from wearing dresses such as swimsuits, and they also suffer serious self confidence issues as a result. Cellulite does not disappear even with rigorous exercising.

How Cellulaze Cellulite Laser Treatment Helps

The Cellulaze Cellulite Laser Workstation by Cynosure is considered the first aesthetic laser cellulite treatment device that is capable of precisely targeting the underlying cellulite. Its combination of the Nd:YAG 1440 nm pulsed wavelength and the SideLight fiber that provides bidirectional laser flow enables precise targeting of the cellulite. The fibrous septae of the cellulite is released after it is thermally subcised. This reduces the cellulite levels and the bulges come down. As this happens, the skin is tightened and thickened so that the loss of cellulite does not result in loose or sagging skin.

Advantages of Cellulaze Laser Cellulite Treatment

The advantages of Cellulaze cellulite treatment are the following:

â€¢ It is a minimally invasive procedure.

â€¢ It can be performed under local anesthesia and is therefore much safer. Being minimally invasive, Cellulaze also causes no visible scarring.

â€¢ It is also more effective than the creams, lotions and medications that are sometimes prescribed for dealing with cellulite.

â€¢ It takes less than an hour to complete and can be performed on an outpatient basis.

â€¢ Its results are felt within the first few weeks and keep improving in the following months. They are long lasting, existing for a year or more.

The long lasting and natural-looking results are achieved due to the cellulite being effectively targeted and the skin tightened as the melted fat is removed. It helps increase the elasticity of the skin, resulting in an overall more youthful appearance, giving the user greater self confidence and freedom from concerns about health risks from the cellulite removal surgery. Cellulaze is quite safe as its FDA approval could testify.

The safety of laser cellulite treatment is reinforced by the fact that only plastic surgeons who have passed the CME-accredited online course and the associated practical training program conducted

by Cynosure are offered the Cellulaze Cellulite Laser Workstation. With laser cellulite treatment you get excellent results that last long and moreover, there are no significant health risks associated with this procedure.
