Medical Inventory Software- a Boon to Big and Small Businesses by [John Smith](#)

Article published on January 19th 2012 | [Health](#)

Medical inventory software is extremely useful to the health care industry. Hospitals, health centres and laboratories today use this software for better patient care. This software maintains an uninterrupted inventory for those who want to keep a track of re-order points, lots code, expiry dates which are all noted and recorded as history.

Features of the Software

With the medical supply and inventory software, medical staff can maintain and distribute medical inventory effectively. The main features of this software include reviewing and validating quantities obtained with contracts, bills of landing, shipping documents and purchase requests. It is able to maintain stock records as well as other documents including material control, supply reports and accounting.

Medical inventory software enables professional management of financial processes such as ordering, procuring and storing supplies. With this software your database automatically receives all the data collected.

Medical supply and inventory software is web-based and there is no complicated hardware or software involved. A barcode scanner is an optional hardware that is good to have. There are four components in this software-the Crew Member Interface which helps people in the emergency department, the Station Manager, the Back Office administration Suite and the Mobile Scanner Application.

Benefits of Medical Inventory Software

There are numerous benefits of medical inventory software. Some of them are listed below.

â€¢ The software not only saves time, but also brings about better accountability. Barcode scanning and electronic recording lessens inventory time greatly.

â€¢ There is elimination of errors as inventory data is automated to the database.

â€¢ There is cost savings by rotating reserve and also sending expired products back to the supply vendor.

â€¢ The medical supply and inventory software has the provision to notify you when to make an order and also the quantity of the order.

â€¢ Purchase orders can be created easily which can be directly sent to the suppliers.

â€¢ Finally, the productivity of the staff is enhanced.

Aviation Maintenance Software

Aviation maintenance software is a server-based application which you can gain access to using the internet from anywhere. It can be connected using an iPad, iPhone or a smartphone. It is incredibly useful to the aviation industry as aircraft maintenance operations can be done easily using this application.

The Aviation maintenance software can display on the screen the condition of not only an aircraft but of a whole fleet. It can also track the complete service history giving information about the days since the last inspection. The software is scalable, modular and can also be customized according to your needs. Additionally, it is very affordable.
