Modified Jessner Peel by Nicoleflourweens

Article published on December 28th 2011 | Health

A modified Jessner peel treatment is found effective to deal with skin irregularities that are relatively deeper and are severe in nature. Once the treatment is over, you will find enlarged skin pores vanished, sun damages, and other skin irregularities are corrected satisfactorily. The results and safer approach of Jessner peel to treat many skin flaws have made this peel very popular and it is now widely used by people who want to get rid of many types of skin abnormalities.

A modified Jessner peel solution is prepared in accordance with the conditions to treat, and the type of skin is also taken into consideration. If a normal Jessner peel comes with 14% salicylic acid, 14% lactic acid, and 14% resorcinol, then a modified Jessner peel could be with a change that suits more the prevailing conditions. Such modified solutions can treat skin irregularities that usually not easy to treat with other peels of normal strength.

Many benefits can be noted with a modified peel. Unlike many other peels, the improvements can become noticeable after just a single treatment of a modified peel. However, for the best results to become noticeable, you would have to undergo about three treatments of a modified version of Jessner peel. Enough healing time has to be allotted between two treatments to the skin before the next session is done.

Soon after the treatment with the peel, the skin becomes sensitive, but the procedure itself is relatively painless except for some sort of discomfort that can also be controlled by using local anesthesia. The face becomes red and you feel it has become tight. However, you can return to your normal activities, as the procedure doesnâ€™t have any downtime. In about two to three days after the treatment, the skin starts flaking that can continue for about seven days. Donâ€™t attempt to pick the peeling skin, it is very important, otherwise, you are risking the chances of scarring and infection.

The modified Jessner peel is intended for all skin types, and it is meant to fade post-inflammatory hyper-pigmentation, age spots, fine lines, wrinkles, etc, has a combination of different agents that do the job very satisfactorily. In most of the modified cases, if you are allergic to aspirin or resorcinol, you have to inform the treating professional well in advance.

The peel can stimulate elastin and collagen production that helps a lot to restore skinâ€™s health, youthful look and tone. Other benefits include smooth texture of the skin, balanced oil secretion, good skinâ€™s hydration, prevention of acne breakouts, etc. The dissolving of the top layer fades many skinâ€™s marks like the superficial wrinkles, fine lines, etc. In a three treating sessions, with 3 â€“ 4 week spacing, you can note a remarkable change in the skin. Moreover, the pores will be unclogged and the skin will be free from bacteria. Many benefits of a modified Jessner peel are there, which can be experienced by most of the people with the exception of those who are not allowed to undergo a Jessner treatment.

Some skin care professionals recommend using modified Jessner peel as an adjuvant treatment with TCA when you have to treat melasma, and post-inflammatory hyper-pigmentation, etc. Well, since you canâ€™t undergo a Jessner treatment at home on your own, the skin specialist where the treatment is scheduled, will check the conditions to treat and can recommend you the best-suited treatment for your conditions. This is what we have to follow if we want to get better results and to avoid any complications. Following professional advice is always helpful and frees us from many worries and complications.
