Laser eye surgery is one of the latest forms of surgical procedures. If you wear glasses or contact lenses, you know how tedious it is to put them on, take them off, maintain them and remember them wherever you place them. Most people will readily agree to fix the eye surgically, especially if the term "laser"™ is involved. Prior to embarking on this venture, it is essential to know how laser eye surgery Orange County works.

PRK And LASIK Laser Procedures

Laser eye surgery Orange County includes two types of procedures, PRK and LASIK.

PRK surgery involves the following:

A computer-operated laser beam cuts through the cells on the eye surface to reshape the cornea

PRK shapes the cornea

It is considered to be the safest laser surgery Los Angeles

PRK eye operation takes more time for recovery

LASIK eye surgery involves:

The eye surgeon to cut a flap in the cornea.

The flap is raised and the laser beam incises the cornea to reshape it

It is not a fully automated surgery like the PRK

The main difference between the PRK and the LASIK laser eye surgery Orange County is that PRK carves the cornea while the LASIK incises it. Laser operation processes are quick, lasting only a few minutes. There can be a mild irritating sensation, but nothing unbearable. It may take up to 6 months to fully receive normal eye sight, but this depends on the individual.

Disqualifying Candidates For Laser Procedures

Laser surgery Los Angeles is always performed by highly qualified and proficient ophthalmologists or eye doctors. Thousands of successful laser surgeries are carried out every year in the United States. Those who do not qualify for laser eye surgery Orange County include pregnant women, nursing mothers, and patients below 18 years of age, those with dry eye syndrome and those who don't sign a document of approval. There have been incidents of complications for such cases, which is why they are dismissed as ineligible by ethical ophthalmologists.

Cost Of Laser Eye Surgery

Like any other careerists, eye surgeons are concerned with profits. Competition is tough in the medical field, which is why laser surgery Los Angeles is charged with different rates. However, a typical laser beam eye operation will cost \$1000 to \$1800 for a single eye. This is because the ophthalmologists need to maintain their highly advanced devices in best working condition as well

as earn their living. Therefore, it is imperative that you have sufficient funds arranged to undergo laser eye surgery Orange County . Despite the high cost, regaining normal sight and not having to use props such as glasses and contact lenses is worth the investment. Eyes are one of the most delicate organs of the body, and it requires utmost care.
