Providing People with Visual Impairments the Possibility to See Clearly: Corrective Contact Lenses by [Vincent Davis](#)

Article published on February 15th 2012 | [Health](#)

Yet far too often, people neglect the gift of sight which permits them to see the beauty of the world and assists them work in everyday life.

Visual impairment is a condition that influences millions from all walks of life. According to the World Health Organization, there are presently 285 million visually impaired people worldwide. Around 39 million are blind while around 246 endure low vision. Not surprisingly, 90% of the visually impaired live in the world's developing countries.

Different elements lead to visual impairment. Uncorrected refractive errors continue as one of the significant causes of eye conditions worldwide. In addition, one's lifestyle and leisure activities may be considered contributing elements to blurred vision and eventually, visual impairment. World Health Organization further reported that eye cataracts continue to be the number one cause of blindness in low- to middle-income nations.

Fortunately, based on the World Health Organization's October 2011 Fat Sheet, the number of people afflicted with visual impairment due to contagious diseases has substantially decreased in the past twenty years. What is more interesting is that 80 % of all visual injuries are deemed curable.

Most diseases of the eye could possibly be prevented if people would only take matters seriously and follow healthier way of livings. People are also suggested to go to their ophthalmologist or any general practitioner must they start experiencing blurry vision and frequent headaches. These symptoms may cause more severe afflictions when ignored.

Luckily, developments in medical technology have introduced the way for different corrective treatments like glasses and contacts Vancouver patients use. Corrective glasses are without a doubt the oldest treatment for visual impairment like uncorrected refractive mistakes. They have assisted people watch better as far back as the early 1800s. Today, corrective glasses, along with contact lenses, allow people with myopia, hyperopia, or astigmatism to achieve a better quality of life.

Contact lenses Vancouver clinics provide, on the other hand, are available in numerous forms. Corrective contact lenses work like ordinary eye glasses. However, they are more beneficial since persons do not have to put on large ugly glasses that restrict their peripheral vision. It also decreases the opportunity of misplacing glasses and leaving one unable to view clearly.

Today, a lot more people wear contact lenses as their chosen form of corrective eyewear Vancouver eye specialists prescribe. Now, just imagine what a better world it would be if the 246 million people with visual issues had the ability to put on corrective lenses.
