EXCELLENCE IN PATIENT CARE

Radiation oncology is the earliest method involved in the treatment of cancers. It involves the application of ionizing radiations like the x-rays, which are focused as a beam on the malignant tumor cells that cause cancer. Cancers occur in almost all the parts of the body. Radiation therapy can be used in the treatment of these varieties of cancers. Abdominal cancer treatment, for the cancers occurring in the abdominal region, gynecological cancer treatment, which is related to cure tumors in female reproductive systems, pediatric cancer treatment, involving child health care, and colorectal cancer treatment, given to those suffering from intestinal cancers are some of the major areas where radiotherapy is practiced apart from brain, lungs etc. Radiation oncology in India is given highest priority as most of the population suffers from this malignant neoplasm.

RGCIRC offers support and gives the utmost care to those bearing tumors. Several cancer centers are established in the country, to provide a proper radiotherapy to patients. All these are monitored by RGCIRC. All the required information about radiation therapy that is provided in the country is given in the website www.radiationoncologist.in.

What exactly does the website www.radiationoncologist.in convey?

This website is mainly associated with the Artemis Medicare services Pvt. Ltd, of Haryana. It contains all the necessary information about several other cancer centers in India associated with RGCIRC, and the treatments they offer to the patients. It is designed in such a way to give in all the true facts about what radiation therapy means, its history and its basic functional mechanisms in quick links.

According to the information furnished in the website, www.radiationoncologist.in, it is known that several types of radiotherapy are offered in the country like the external beam radiation therapy (EBRT) or teletherapy, Brachytherapy or sealed source radiotherapy, intensity modulated radiation therapy (IMRT), systemic radioisotope therapy, image guided radiation therapy (IGRT), virtual simulation, 3D- conformal radiotherapy (3D-CRT), total body radiation, stereotactic radiation, particle therapy etc.

These can help in the Gynecological Cancer Treatment, breast cancer treatment, abdominal cancer treatment, lung and pediatric cancer treatment, colorectal cancer treatment etc.

More about the website:

This website furnishes the information about the chief consultant oncologist in India, working at different cancer centers through out the country. It also contains the brief explanation about treatment procedures involved in treating several kinds of head and neck cancers, brain cancers, breast cancers, lung cancers, pediatric cancers etc. the website www.radiationoncologist.in also conveys the valuable information about the different side effects that are seen as a result of exposure of tumors to the ionizing radiations. A detailed note about medium and long term side effects like dryness, hair loss, fatigue, neutropenia, fibrosis etc are mentioned clearly.

This website also contains several happy notes as testimonials posted by patients who received the valuable services in the treatment of their tumors. Number of blog articles explaining the treatment methods and modern advances in the field can also be seen in the website.
