Article published on February 16th 2012 | Health

Water is one of the most essential factors to lead a healthy and safe life. In cities, people consider corporation water as safe water. The corporation water goes through a treatment plant before its distribution to the entire city. However, this treatment process is not purification. Corporation uses bleaching powder, for chlorination of drinking water. The impurities of water are not completely removed. People had a false notion that only drinking water should be a purified. However, water used for cleaning, washing and bathing should be clean and purified.

Water is the source of 80% of diseases. Therefore, people have realized the need of water purifiers for safe water. Only drinking water infuses within people diseases like cholera, polio, hepatitis A, typhoid. Bacteria and virus that is present in the drinking water is not visible by naked eyes. Therefore, health experts have realized that UV ray can cure the water of the impurities present in it.

Many people use ordinary filters at home for safe water. Even, today people use cotton clothes to filter the boiled water for purification. However, it has to be remembered that these old and conventional ways are rejected by medical science. Such conventional ways are no longer effective these days to purify the water from contaminants. Continuous researches have proved that even boiled and filtered water should not be stored for a long time in bottles or cans. These common methods of water purification are impractical these days. Therefore, only drinking water should be purified before drinking. Today, different companies are installing water purifiers with the latest technology. Therefore, people should opt for these latest water purifiers for a healthy life.

Ultraviolet rays are used for purification. This, technology is adopted world wide and is a popular technology used by millions of families. It is an authentic and medically approved technology to get safe water. UV purifiers can purify water with high micro organisms. In the latest and updated models, 253.7 nanometer UV ray is used for only drinking water. Bacteria and virus present in water is cleared as soon as the water comes in contact with the ultraviolet ray. Finally, safe water is ready to use. Therefore, always select a good purifier for your home. You will get the reviews of these products in internet and can take suggestions from the experts of those companies.

If you want a healthy life and a healthy family, then water purifier is a necessity today. Health awareness and consciousness can lead to a safe environment and healthy society.
