Some Facts About Brow Lift Surgery by [Julia Roger](#)

Article published on March 14th 2012 | [Health](#)

When the signs of aging reflect on your face, you tend to get worried. It is quite natural. However, there is nothing to worry about, because there are ways to beat and avoid the signs of aging, not fully but to some extent. Recently, many cosmetic surgery procedures help fighting the signs of aging. Brow lift is one among those cosmetic surgery procedures. The eyebrows are lifted by performing surgery on the forehead in this process. Hence, this is also called as forehead lift surgery.

Ladies in the age group of 40-60 years generally go under the knife for brow lift surgery. In this surgery, the frown lines are reduced that occur in the forehead and even on the high bridges of the nose. The women who undergo brow lift surgery look

young and fresh. This procedure is generally regarded as the face rejuvenating process. The brow lift surgery is performed together with the eyelid surgery. The outcome of this surgery is smooth forehead without ant wrinkles and frown lines. It is always better to utilize multiple surgical approaches. This would surely give you the most desired result.

It is worth mentioning a little history about the brow lift surgery. Erich Lexer, a famous German surgeon, did the first instance of this surgery in the year 1910. From the time of Lexer, until the late 1950s the main procedure of this surgery was termed as coronal or open forehead lift. In the modern days, the use of Botox makes the surgery procedure simpler than what it was in the past. Endoscopic surgery procedures are generally used in the recent day forehead lifting surgery. These surgeries are giving very positive effect both physically and psychologically.
