Article published on August 7th 2012 | Health

To know, more about spider veins or to know the veins, we have to take a step backward and know about the small dilated or the widened blood vessels which are found near the surface of the skin, and such vessels are known as telangiectasias. Such vessels normally measure between.5 - 1mm in diameter, and can develop anywhere in the body but are commonly seen around the face area of the nose, cheeks and the chin. On some cases these veins are much thicker around the legs and the joints like the ankle or again mostly around the known joints and such thick ones are known as varicose.

The east doers have the spider vein problems, but they are so less in number that most of the physicians can hardly refer to anyone who can right diagnose and cure the nerves. Virginia is lucky in this case, and there are physicians, rather trained physicians who are specialised in vein care or any vascular diseases. The physicians of Spider Veins Northern VA says that there are many people who suffer from spider vein and seek the assistance of expert physicians who are technically termed as interventional radiologist. There are many reason which causes spider vein problem and one is the retardation, or when one enters the phase of Alzheimer. Some are again developed due to abnormalities that are closely related to the mimic behaviour of the vascular neoplasm. They are composed of abnormal aggregation of arteries, capillaries and veins.

Spider Veins Northern VA is all in not only rectifying the veins and the disrupted skins caused due to spider veins, but are also in the spread of awareness to why the spider veins are caused. There are known to be numerous inherited or the congenital factors that cause the dilated blood vessels. Some of the general factors apart from many other medical and biological factors are as follows:

Face is the only and the most exposed part of the body and some suffer from delicate and sensitive skin, and some are more unfortunate with allergies which involves blood vessels some times, thus one of the causes is the environmental damage such as that caused by sun or cold exposure

The skin must have experiences few harsh treatments such as chemotherapy and sometimes the trauma to the skin may be denoted as to any type of surgical incision. Sometimes apart from plastic surgery (where there are actually the least of the chances), the cosmetic surgery causes the havoc. One must be aware that a plastic surgeon can be a cosmetic surgeon, but it is never the vice versa, because the study pattern of the two are different and the certificates and the practical examinations also vary, thus of the cosmetic surgeon is not reputed or is not an expert, then there are bound to be spider veins, and Spider Veins Northern VA has come across such cases.

The third cause is very much relevant to the previous but yes, juts that it may be the medical rays like the radiation exposures such as that experienced during radiotherapy for the treatment of cancer or any other similar diseases.
