Article published on January 30th 2012 | Health

The electronic cigarettes or e-cigarettes are the battery operated device which work like a real cigarette without affecting the lungs of a smoker. When a smoker uses electronic cigarettes in place of real cigarettes, he remains free from all the 400 harmful chemicals that usually enter his lungs while smoking with real one. On the other hand, thee cigarettes offer only pure nicotine hit every time a smoker smoke them. These cigarettes are quite effective if anyone wants to quit smoking as he can still enjoy the pleasure of smoking, without smoking in reality. These cigarettes are available at very low cost and could drop 70% of the monthly expenses on cigarettes.

Components of e-cigarette

There are three main essential parts of an electronic cigarette which are battery, cartridge and an atomizer. It will be better to know about them to understand the working of these cigarettes. A battery is a longest part of a cigarette which is made up of lithium and contains an inbuilt sensor with LED. A battery starts working as soon as a smoker inhales. An atomizer is a smallest part and contains a coil which is used to vapourise e-liquid filled in a cartridge. Coil heats up after receiving charge from the battery. A cartridge is also considered as a mouthpiece and e-liquid soaked wadding is found inside it which is used to produce smoke when a smoker inhales.

Why to choose electronic cigarettes over real cigarettes?

A real cigarette contains more than 4000 chemicals including tar, arsenic, carbon mono oxide, cyanide etc, which are toxic and may damage smokerâ€™s lungs. Also, if a smoker uses cigarette for a bit long time, it may causes cancer. These cigarettes are boon for those who are chain smokers as it is hard for them to quit smoking. But with e-cigarettes, it is possible. These cigarettes are the safe way of smoking and can be used in public places without restrictions. This is because the smoke produce by these cigarette are exactly the same smoke used in movie to produce fog. Therefore, if anyone inhales the smoke, it will not harm at all.
