The skinny on airbrush tanning

These days, most of us simply don't have the time spend endless leisurely hours languishing in the sun to get a tan. More importantly, the dangers of sun worship have been made so clear in recent years that many of us have turned a cautious eye toward the sun. That does not mean, however, that we don't miss our golden glow. So, what's the answer? Enter airbrush tanning. Airbrush tanning is a safe, affordable way of getting a natural-looking tan without the damage effects of the sun.

Airbrush tanning: Some frequently asked questions

How long can I expect my new airbrush tan to last?

That can vary depending on several factors, such as the skin tone, the quality of the airbrush tan, exfoliation of the skin, and so on. Generally, however, an airbrush tan will last at bare minimum between 5 and 7 days, with the average being about 10 days. You can make your airbrush tan last nearly indefinitely, however, with proper maintenance. This includes the use of a tan extender and the application of moisturizers and oils to keep the tan looking its best. Generally, an airbrush tan is meant to be temporary however and one should expect to have to have it reapplied periodically.

How does airbrush tanning differ from self-tanning products such as creams and lotions?

Although the actually process by which the skin looks tanned is essentially the same with airbrush tanning as it is self-tanning products including creams and lotions, these processes produce very different results. Airbrush tanning produces a smooth and more natural looking tan. Moreover, the process of airbrushing a tan is much less messy than other methods. Just as airbrush makeup is used to achieve a flawless finish for a professional photo shoot, airbrush tanning produces the same standard of flawlessness. Airbrush tanning can be done by one person, whereas creams and lotions work best when applied by more than one set of hands so as to best reach every part of the body. Even with help, however, the results of using a cream won't parallel those that can be achieved by an airbrush tan.

What other advantages are there to an airbrush tan?

Airbrush tanning does not require the sun. This is a benefit for many reasons. First, there are the obvious health reasons. UV rays are very dangerous, but that is not a concern where airbrush tanning is concerned. It is a safe way to tan. Also, if you have skin that is difficult to tan, you can enjoy a sun-kissed glow easily with airbrush tanning. Finally, airbrush tanning will save you time and money. One session of airbrush tanning is equivalent to several tanning bed visits!

Getting a great tan without the use of the sun is not only possible, it's easy! Airbrush tanning offers all of the benefits of tanning with none of the dangers of the UV rays associated with traditional sun tanning methods of the past. Keep your skin healthy and opt for a sun-free method of tanning.
